INTRODUCTION TO THE THIRD REVISED EDITION.

This revision was undertaken in accordance with the following order:

United States Naval Observatory,
Washington, February 19, 1886.

SIR: The preparation of a third edition of Yarnall's Catalogue having been decided upon you will please take charge of the work, collecting as many as possible of the errors that have from time to time been published, and submitting the same to the Superintendent upon its completion.

It is desirable that the work be prosecuted as rapidly as is consistent with the regular work of the 9.6-inch telescope.

Very respectfully,

Geo. E. Belknap, Commodore, U. S. Navy, Superintendent.

Prof. Edgar Frisby, U. S. N., Naval Observatory.

On commencing the work it was found that a great many errata had from time to time been published in various numbers of the Astronomische Nachrichten by Professors Holden, Krueger, and Millosevich, and many more have since been published by Dr. Peters in the third volume of the Memoirs of the National Academy of Sciences. I have also received many valuable hints and suggestions from other gentlemen engaged in astronomical research, to all of whom I am much indebted for the assistance afforded by their valuable notes. The work, however, had not proceeded far before it was discovered that an examination more complete and systematic than any previous one was necessary, including a re-examination of all anonymous stars, comparing the named stars with those of existing Catalogues, re-numbering all the stars, changing names whenever necessary, and supplying names that existed previous to the publication of the Catalogue.

The recent publication of the Southern Durchmusterung, Gould's Zones, and General Catalogue have been invaluable in enabling me to identify many of the stars and to correct others.

One of the most common mistakes in the Catalogue was caused by combining the Right Ascension of one star with the Declination of another, a result that is always liable to occur whenever the Right Ascension is observed with one instrument and the Declination with another, especially when the other co-ordinate is not noted with sufficient exactness for verification. Sometimes a mistake of 1, 5, or 10 degrees was made in setting, sometimes the time was recorded wrong by an even number

of minutes, and occasionally by an hour. It is, however, believed that no changes have been made that are not warranted by the record or that are not fairly deducible from it with the highest degree of probability. To this end, whenever a doubtful case has arisen, all known authorities have been compared with the records, extending over a period of more than thirty years. By these means, very often, mistakes have been made apparent. When a Right Ascension has been observed and no Declination noted, or a wrong Declination recorded, it has sometimes been correctly determined by the wire intervals. If, however, these methods are unsatisfactory, or the stars can not be found in other Catalogues, the heavens have been examined, and it is believed that, with one or two exceptions, every star has been completely identified. These are fully explained in the Notes, and no position has been retained that is not completely verified. In a few instances, however, where anonymous stars have been observed two or three times in both co-ordinates, and all the observations agree, it was not thought necessary to examine the heavens for verification, notwithstanding the fact that they could not be found in any other Catalogue.

In giving names to stars the following principles have generally been adopted, taking eare, however, not to change the existing names, unless for some good and satisfactory reason:

- 1. The oldest name in any standard Catalogue has been preferred, unless there is some uncertainty or mistake in that Catalogue, or unless the name already used is that of one of the recognized standard authorities, although not the oldest. In such cases the other names have been preferred.
- 2. No Catalogue issued since the publication of Yarnall's Catalogue has been used for that purpose. Most of the names in the Catalogue of the British Association have been retained, although in the case of double stars, or such stars that had only one authority given in that Catalogue, the original name has been retained.

There are two sets of names that have been entirely changed, the first set being those marked (*) Washington, which were only a list of stars to be observed, the number indicating merely the order of time in which the request for observation was made. They were all stars that had been observed by Mr. Ferguson for comparisons of comets and asteroids. A list was made and numbered, and this number was inadvertently introduced into the Catalogue as the name of the star. Whenever names from existing Catalogues could be found for these stars they were used; otherwise they are designated Anonymous.

The second set is that of the Pleiades, in which the greatest confusion exists. The letter A prefixed to these stars has reference to Bessel's anonymous stars, of which there were only 40. It appears, however, that Mr. Ferguson, in observing the Pleiades on the Equatorial in the year 1863, designated all the observation of stars in this group throughout the year by the letter A, these observations extending as far as the number 48. I have retained the numbers up to and including 40, using, however, the letter B for Bessel. The other names in this group were simply names taken in order from the working list. Some of them had as many as three different names, depending principally on the time when they were observed on the Equatorial, without any reference whatever to their Right Ascensions. As all these stars have

been found in Wolf's Catalogue of the Group of the Pleiades, containing 571 stars, and published in the Annales de l'Observatoire de Paris, Tome XII, Deuxième Partie. I have adopted these numbers for the small stars in this group, using the letter W. for Wolf to distinguish them from the others. The notation of the stars in Præsepe is that of Professor Hall in his Catalogue of 151 stars in Præsepe, and published in the Washington Astronomical Observations for 1867, two stars being added that were observed but inadvertently omitted from the Catalogue. The names of the Lamont stars are taken from the separate Catalogues that correspond to the given Declinations. The initials M. Z., Tr. Z., and Mer. C. Z. refer to the Washington Mural Zones, Transit Zones, and Meridian Circle Zones, respectively.

As the object of this revision was merely for the purpose of correcting mistakes, I have not added any observations or even completed an unfinished one, excepting such as were observed but omitted from the Catalogue, the apparent additions being found in some of the published volumes or in an unreduced state in the observing books. The only use made of the Equatorial observations was for the purpose of verification. Whenever any additions have been made the positions were computed entirely on a uniform system with that of the other stars, and not a single change has been made without consulting the original observing books and Chronograph sheets whenever they could be found. Occasionally mistakes in other Catalogues have been detected. These have been alluded to in the Notes. It has been considered necessary to publish the Notes with two arguments, that of the old and that of the new edition. Sometimes the numbers in one edition will correspond to two or three numbers in the other, and vice versa. The first argument has reference to the third edition, the Notes generally explaining the changes that have been made in the second edition.

The stars in the Catalogue have all been compared with standard Catalogues as far as possible, and it is confidently believed that most of the mistakes have been corrected.

Very respectfully, your obedient servant,

Edgar Frisby,
Professor of Mathematics, U. S. Navy.

Capt. R. L. Phythian, U. S. N.,

Superintendent U. S. Naval Observatory, January 29, 1889.

INTRODUCTION TO THE FIRST EDITION.

United States Naval Observatory, Washington, April 25, 1873.

ADMIRAL: In the latter part of the year 1858, finding the results of nearly six years of my labor with the Mural Circle reduced and nearly ready for the press, it occurred to me to endeavor to complete the observations by observing the Right Ascensions, and, after they should have been observed and reduced, to have them published in the form of a Catalogue. With this view, I procured from Captain Maury, then Superintendent of the Observatory, permission to observe with Professor Major on his alternate nights with the Transit Instrument; and Professor A. W. Lawrence, who had been Professor Major's assistant, was transferred to the Mural Circle as my assistant. By continuing to observe in this way, we began rapidly to accumulate observations in Right Ascension, as well as to add to those in Declination until 1859, when, Professor Major having resigned his commission in the Navy, I came into full possession of the Transit Instrument, with Professor T. J. Robinson as my assistant from May, 1860, to July, 1861. These observations were all reduced by me.

The stars consisted mainly of stars used in the Army surveys for observations with the zenith telescope, many stars in the lists of the Coast Survey, and many of Lacaille's stars which had mostly been observed by Lacaille only, and for observing which our Observatory was favorably situated. During all these years, Mr. James Ferguson, who so faithfully labored for so many years with the Equatorial, was making constant demands upon me for observations of comparison stars for the objects observed by him; and this will account for the great number of small stars in the Catalogue.

The Right Ascensions at this time, and subsequently, were observed by the chronographic method, and in the manner described in several of our volumes; the Declinations were observed with the telescope micrometer in precisely the same manner as described in any of our volumes after that for 1847.

When the time came for putting these observations in the form of a Catalogue, the number of stars having greatly increased, I concluded to extend its limit so as to include all the stars of which Right Ascensions and Declinations had been published in our volumes; and this, with a few exceptions, has been done.

The idea of forming a General Catalogue of our observations had occurred to Mr. Ferguson; and he, assisted by Professors Hall and Eastman, collected on sheets the observations made from 1845 to 1850, inclusive; and the observations of 1845 having been reduced by Professor Hall to 1850, the collection was transferred to me for further reduction. The stars transferred to me were those of all the instruments, and the places of the stars were united into one for each co-ordinate.

The work of the Meridian Circle was well known to be inferior to that of the Transit Instrument, the Mural Circle, and the Prime Vertical Transit Instrument, and I did not think it well to give it equal weight. I therefore revised the list, separating the observations under the heads of the various instruments, and adding some stars observed with one co-ordinate only, and for that reason not published in the Catalogue for 1845.

RIGHT ASCENSIONS.

The stars whose places are given in this Catalogue were observed for Right Ascension with the Transit Instrument and the old Meridian Circle, the number with the Transit being much the more numerous; those with the Prime Vertical Instrument being entirely rejected. Equal weight was given to all the observations with the Transit Instrument, and half weight to those with the Meridian Circle. The observations, extending over a period of twenty-seven years, were originally reduced with very different data, and the most important step in forming the Catalogue has been to reduce them to a uniform standard. The observations, as published, were reduced to 1845 and 1850, epoch of the sun's mean longitude 281°, and to 1860 and 1870, epoch of the sun's mean longitude 280°.

The epoch adopted for the present Catalogue, to which I have reduced all the observations, is the Besselian epoch 1860.0, when the sun's mean longitude was 280°; and the Right Ascensions for that epoch are found in Dr. Gould's "Standard Places of Fundamental Stars, United States Coast Survey," first edition, which was issued from the Coast Survey Office September 13, 1862, although Dr. Gould had previously furnished the Observatory with a copy in the first part of 1862.

Our star places of time stars are identical with those of Dr. Gould, as published in 1862, and they were afterward published in the American Ephemeris for 1865. This list has been further corrected by some corrections published in the volume of the American Ephemeris for 1869; but, for the sake of consistency, I have thrown out as nearly as possible these corrections from the small number of places used in 1870 and 1871. This list not being quite as large as we desired, Professor Newcomb added some other stars whose places were quite well known, for compiling which he compared the Greenwich, Paris, and Washington observations.

Having so many different epochs and different star-lists, the first step was to reduce all the separate results for Right Ascension, given in the several volumes, to what they would have been had the same star-places been adopted in the reductions, and had the stars been all reduced to the epoch 1860.0 without any correction for proper motion. For this purpose I have formed, as a standard for reference, the following Table I, in which are given the names of all the clock-stars used, and their Right Ascensions for

184 .0, 1850.0, 1860.0, and 1870.0. These places were formed from the Annual and Secular Variations of the Star-Tables of the American Ephemeris and Nautical Almanac, where available; and for those stars not in the American Ephemeris the values of the Precession and Aberration Constants of those Tables were used; and the proper motions used were those published by the Reverend R. Main in Volume XIX of the Journal of the Royal Astronomical Society.

SUPPLEMENTARY NOTE.*

The Right Ascensions of the following Catalogue may be reduced to Newcomb's standard, as defined in section 7 of his paper on the Right Ascensions of the Equatorial Fundamental Stars (Appendix III to the Washington Observations for 1870), by the application of the following corrections:

1. Proper motion from the mean year of observation to 1860.

2. Systematic correction depending on the Right Ascension and given by the formula,

$$\Delta \alpha = +0^{8}.021 + 0^{8}.014 \cos \alpha - 0^{8}.025 \sin \alpha$$

the value of which may be taken from the following table:

R. A.		Δα	R. A.		Δα
h.		s.	h.		s.

The Right Ascensions of α Canis Majoris and of α Canis Minoris, for this Table, were obtained by using the annual variations and value of P, given by Professor Newcomb in Appendix I, volume for 1870, of the Washington Observations; the place of α Canis Majoris differing 0°.013 from the place given by Professor Newcomb.

The Right Ascensions of the stars whose places are given for 1845, are, with two or three exceptions, those of stars given in the British Nautical Almanac for January 1, 1845, and the observations of 1845 were reduced to the beginning of that year. For the years 1846, 1847, 1848, 1849, and 1850, the stars whose places were used are given in the British Almanac for 1850, and all the observations were reduced to the beginning of 1850. The stars observed in 1858, 1859, 1860, and 1861, were reduced with the places given in the British Almanac for 1860, and the observations were reduced to 1860.0. The stars observed in 1862, 1863, 1864, and 1865, were reduced with the places in Table I for 1860, and the observations were reduced to 1860.0. The stars observed in 1868, 1869, 1870, and 1871, were reduced with the list of the American Ephemeris without the corrections of the volume for 1869; and for 1870 and 1871 these corrections have been eliminated for the stars to which they belong. The observations from 1865 to 1871 were reduced to 1870.0.

In order to correct the Right Ascensions previously reduced from observations, I have in the following Table given a comparison of the observations with the standard places in Table I, for the different years; for this purpose I have used all the observations of the stars for the different epochs and instruments.

In order properly to compare the observations with the standard, it was necessary to correct them by a small quantity $\equiv \Delta \mu + y$. $\Delta \mu$ is the correction necessary to reduce the proper motion used in the different years to that of the standard published in Table I. The Almanac for 1845 gives only precessions for all the stars, except a few, marked with a *, whose proper motions are large, and for which I used as a correction the proper motions of the British Association Catalogue corrected by those of Table I. For the other stars the proper motions of Table I were used.

For 1850, the proper motions to be corrected were those published in the British Almanac for 1848; and for 1860, for the stars observed from the places of the British Almanac, the corrections are those of Reverend R. Main reduced to those of Table I.

All stars in the Catalogue are published without proper motions, and for the clockstars, the quantity taken out is μ multiplied by y; y being the mean year of the observation from the epoch. To restore these stars to the proper value, it will be necessary to use the proper motion given in Table I multiplied by the mean year.

For all miscellaneous stars, I have taken out exactly what had been added to or subtracted from the reduction to mean place, and my rule in reducing, where proper motions had been used, was to use the proper motions of the two tables of the Reverend R. Main, volume XIX of the Royal Astronomical Society; and for other stars not given by Main, the proper motion found in the British Association's Catalogue. These remarks apply also to the observations in Declination.

After the year 1861 no proper motions have been used in the reductions, except in the places of the clock-stars, and these have been taken out of all the places in the Catalogue.

Correction for equinox =
$$\frac{\sum n \triangle a}{\sum n}$$
 = $+\frac{120^{8}.56}{3029}$ = $+0^{8}.043$

DECLINATIONS.

The Declinations published in this Catalogue were observed with the Mural Circle, the Meridian Circle, and the Prime Vertical Transit Instrument. Equal weight is given to the observations of the Mural Circle and Prime Vertical Transit Instrument, and half weight to the observations of the Meridian Circle.

It is not considered necessary to describe here the method of observing, as that has been done at length in the volume for 1846 and those of subsequent years.

The observations having all been reduced with the Latitude $+38^{\circ}$ 53′ 39″.25, they have all been changed in value to correspond with the value of the Latitude $+38^{\circ}$ 53′ 38″.78 given by Professor Newcomb in the Appendix to the volume for 1864. In fact, I applied the correction -0″.5 to the Declination of stars above the pole, and +0″.5 to the places of stars observed below the pole, multiplying the places above and below the pole, respectively, by the number of observations of each kind and dividing the result by the sum of these numbers. This gives the Declination which would have been obtained had a Latitude $+38^{\circ}$ 53′ 38″.75 been used; and this remark applies to all the observations, with the exception of a few observed in 1872 with the Latitude $+38^{\circ}$ 53′ 38″.8. This difference is not material, as we reduce the observations to tenths of a second only.

The observations with the Prime Vertical Transit Instrument were corrected by the formula,

Correction
$$\equiv \Delta \delta \equiv \frac{\sin 2\delta}{\sin 2\varphi} \Delta \varphi$$

For $\varphi = 38^{\circ} 53' 38''.33$, and $\Delta \varphi = 0''.45$, the formula becomes,

$$\Delta \delta \equiv [9.66315] \sin 2\delta$$

For the sake of consistency, it became necessary to leave out from the Observations some corrections of Professor Newcomb which were made from a comparison of Observations direct and by reflection This was readily done, as the list of mean places had not been corrected, the correction having been made in the Catalogue of the year.

A large majority of the declination observations were made with the Mural Circle, and it is a matter of regret that I was not able to re-observe many stars of which only one observation was made with the Prime Vertical Transit Instrument.

The stars in the Pleiades were mostly observed by Mr. Ferguson with the Equatorial; and those in Præsepe are the same that were observed with the same instrument by Professor Hall, and which were published in Appendix IV of the volume for 1867 of the Washington Observations. Many of these stars, both in the Pleiades and in Præsepe, have been observed with the Transit Instrument and Mural Circle, and the observations have been published separate from those of the Equatorial, but in juxtaposition, in some cases substituting those made with the Transit Instrument or Mural Circle for those made with the Equatorial. The notation of the stars of the Pleiades is that of Mr. Ferguson.

REDUCTION OF THE OBSERVATIONS.

On page [35], volume for 1847, Washington Observations, is carefully described by Professor Coffin the manner of forming the tables of reduction to their mean place for 1850.0 for the observations from 1846 to 1854, inclusive. "The formulas are those of Bessel; the co-efficients are the same as have been adopted in the American Ephemeris and Nautical Almanac. These include Struve's constant of aberration,

$$a = 20''.4451$$

Struve's and Peters's constants for precession,

$$m = 3^{\circ}.0717,7 + 0^{\circ}.0000,19 (y - 1850)$$

 $n = 20''.0564 - 0''.0000,86 (y - 1850)$

and Peters's co-efficients for the terms of nutation, of which the principal is

$$N = 9''.2236 + 0''.0000,09 (y - 1850)"$$

The remaining formulas are not given here, as they are now familiar to all who use the Nautical Almanac. After 1854 the tables were prepared, as published in our subsequent volumes, from the constants A, B, C, and D of the American Ephemeris; and until 1865 it was necessary to apply a small correction to the Epoch of the star list of the Ephemeris to reduce it to the Epoch, sun's mean longitude 280°. After 1864 the star places and constants were given for the fictitious year, and this correction was not necessary.

The observations made in 1845 to 1850, inclusive, were reduced to the Epoch sun's mean longitude 281°; and as our subsequent observations were reduced to the Epoch sun's mean longitude 280°, it was necessary to correct those observations for about a day's precession, which has been done.

As our observations were reduced to the beginning of years which might be five years, or less, distant from the time of the observation, it became necessary to apply to the observations a correction for secular variation. If

 $\Delta \alpha =$ the annual variation of the star's Right Ascension;

 $\Delta \delta \equiv$ the annual variation of the star's Declination;

$$k = \frac{1}{15} \cos \alpha \tan \delta \Delta \alpha + \frac{1}{225} \sin \alpha \sec^2 \delta \Delta \delta;$$

$$k' = -\sin \alpha \Delta \alpha;$$

$$P = \frac{15}{2} n \sin x'' = .0007292 t^2,$$

the correction is $\equiv Pk$ for Right Ascension, and Pk' for Declination.

All the observations in Declination were corrected for the correction,

$$\Delta (\delta = +0.0813 \sin 2 (\cos \alpha - 0)).0886 \cos 2 (\sin \alpha)$$

for which a convenient table is given in the volume for 1847.

THE CATALOGUE.

The first column contains the ordinal numbers of the stars in the Catalogue.

The second column contains the star's name or number in the Catalogue from which it was taken. The number of the Catalogues is now so great, that their names are not further stated than as given in this column

The third column contains the magnitude of the star, given from our estimates of magnitude, except for a few stars marked with a *; and the magnitude thus distinguished is generally that of the British Association Catalogue, the Radcliffe Catalogue, or that of the Catalogue from which the star was taken.

The fourth column contains the star's mean Right Ascension, such as it would be if reduced without proper motion and referred to the Epoch 1860.0, when the sun's mean longitude was 280°.

The fifth column contains the mean year of observation, and is the mean of the several times of observation made upon the star in Right Ascension in the different years and parts of a year, and will be the point of time from which all subsequent corrections for proper motion will be dated

The sixth column contains the number of observations in Right Ascension; and for the Pleiades and Præsepe for the observations of the Equatorial, the number of comparisons in Right Ascension.

The seventh column contains the annual precession in Right Ascension; for the year 1860, it was computed from the formula,

Precession in Right Ascension $\equiv 3^{8}.072 + [0.12614] \sin \alpha \tan \delta$

The eighth column contains the mean Declinations of the stars, with their proper signs as they would be if *reduced without proper motion* and referred to the Epoch 1860.0.

The ninth column contains the mean year of the observation in Declination, and is a mean of the several times of observation made upon the star in Declination in the different years and parts of a year in which the observations were made.

The tenth column contains the number of observations in Declination; for the Pleiades and Præsepe for the observations of the Equatorial, the number of comparisons in Declination.

The eleventh column contains the annual precession in Declination for the year 1860, and was computed from the formula,

Precession in Declination $= [1.30223] \cos \alpha$.

In transferring the places, both in Right Ascension and Declination, from one epoch to another, I have corrected the precession for secular variation; and for the stars, where the change in the values of n was important or the secular variation not known, I have computed the precessions for the middle time between the observations with the value n and the Right Ascension and Declination of the middle instant.

I was assisted in the computation of the precessions by Professor Lockwood and Mr. A. N. Skinner, assistant observer. I am indebted to Professors Coffin and Newcomb for valuable suggestions in the reduction of the observations, and to Professor

Harkness for his arrangement of the form of the Catalogue, and to all the officers for their sympathy in my long and arduous labors.

The names of the observers, for the stars taken from the published volumes, is not given, as they are on record in those volumes.

Very respectfully, your obedient servant,

M. YARNALL,

Professor of Mathematics, United States Navy.

Rear-Admiral B. F. Sands, U. S. N.,

Superintendent United States Naval Observatory, Washington.

INTRODUCTION TO THE SECOND EDITION.

United States Naval Observatory, Washington, D. C., April 16, 1878.

SIR: Since the first edition of this work was published, I have continued my labors with the Transit Instrument and Mural Circle. During this time, six years, I have accumulated many valuable observations, and as the time has now arrived when I shall have, by law, to be retired from the active duties of the Navy, I have thought it well to publish these Observations in a second edition, which will comprise those stars heretofore published and these now ready for publication.

In pursuance of my labors, I have generally sought to complete the places of stars which were observed but once or twice either in Right Ascension or Declination, and particularly to re-examine many stars observed but once by the Prime Vertical Transit Instrument.

In the course of observing these stars a few others have been observed. In order to prevent confusion, I have published the old stars with the old numbers, and have given numbers distinguished by dashes to the new stars. Some stars which I have not been able to re-observe I have retained with their numbers, with brackets to distinguish them. They are invariably those stars which have been observed but once either in Right Ascension or Declination, and they are generally very small stars.

The methods of observation have been the same as those used in former years, so that the addition of the new places does not detract from the symmetry of the work.

It is proper to observe that this Catalogue embraces all the work done in the Observatory with the old instruments—namely, the Transit Instrument, Mural Circle, the old Transit Circle, afterward sold to Yale College, and the Prime Vertical Transit Instrument, and it so far forms an epoch in the history of the Observatory.

I have in leisure moments compared the observations of Bessel with the places in the Catalogue, and also those of Argelander, and generally have endeavored to add to the correctness of this edition of the Catalogue over the last. The observations have generally been made by myself, but I am indebted to Lieut. Edward W. Sturdy, U. S. N., for valuable assistance in preparing and publishing the Catalogue.

Very respectfully, your obedient servant,

M. YARNALL,

Professor of Mathematics, United States Navy.

Rear-Admiral John Rodgers, U. S. N.,

xxvi

Superintendent United States Naval Observatory.

CATALOGUE OF STARS

OBSERVED AT THE

UNITED STATES NAVAL OBSERVATORY

DURING

THE YEARS 1845 TO 1877.

NOTES TO THE CATALOGUE.

[These notes refer to the mistakes in the second edition and the changes that have been made. The numbers in the notes refer to this edition.]

New number.	Old number.	Remarks.
23	22	This star is incorrectly numbered in Weisse.
25	24	This star is incorrectly numbered in Weisse.
46	45	Mistake of 5° in copying in former edition.
56	55	Mistake of 3° in copying in former edition.
83	82	Weisse seems to be about 3' wrong. See Schjellerup 62 and Bonn VI + 2°, 18.
104, 105	103, 104	Right Ascensions are incorrectly reduced.
116	115	For proper motion see Bonn VII, page 47.
120, 125	119	Right Ascension and Declination belong to different stars. The latitude correction valso applied with the wrong sign.
153, 162	150', 159	Both Declinations belong to the latter star.
161	158	Weisse's Right Ascension is Im too small.
178	175	For the two numbers in Rümker read 54.
196	193, 197	The latter observation was probably over set C, D and E, instead of B, C and D, as
		corded. This change would make the Right Ascensions agree tolerably well. Declination is only approximate.
200, 201	198, 199	Magnitudes and Declinations are interchanged.
212	210	Mistake of sign in copying Declination.
216	214	The zones seem to be in error about 40" in Declination from observations with Equatorial. The magnitude is also copied wrong.
221	218	This position agrees with Gould's zones oh, 624. Magnitude copied wrong.
225, 226	221', 221''	Declinations approximate.
301	293	This star seems to have a large proper motion.
319	311	Bessel's Right Ascension seems to be about 16s too large, probably observed over wro
		wire. Yarnall's position agrees with DM. + 25°, 93.
339	331, 341	The Right Ascension of the former and the Declination of both belong to this star.
344	336, 337	The Right Ascension of the former and the Declination of the latter belong to this st The other co-ordinates are approximate.
345	329	Weisse's Right Ascension is Im too small. This was changed Im.
348	341, 342	The R ght Ascension of the former and the Declination of the latter belong to this st
349	340, 342	The Right Ascension of the latter and the Declination of the former belong to this st
373	366	For proper motion see Bonn VII, page 49.
394	378, 388	The former observation was reduced from 1870.0 to 1860.0 and the wrong sign appl in Right Ascension. It should be 0 ^h 40 ^m 27 ^s .24.
452	443	Differs about 1' from Weisse. The observation is correct.
459, 460	450, 451	Observed as one star in Declination.
476, 477	467,471'	Five of the observations in Right Ascension belong to the former star and five to latter. Observations in Declination are interchanged.

New number.	Old number.	Remarks.
484	469	The Right Ascension was correctly observed, but apparently decreased 1 ^m to agree wit Weisse's position, which is 1 ^m wrong.
492	482	Weisse's Right Ascension is I ^m too small.
• •	549	This observation is 1b wrong and corresponds with 967.
593, 622	590	Right Ascension and Declination belong to different stars, the given Right Ascensio
3,0.		also being 1 ^m wrong for the former star.
594	582	For proper motion see Bond VII, page 50.
646	630	There was a mistake of 5° in copying.
654	637'	Mistake in the computation of precession in Right Ascension.
682, 686	664, 668	The Declination of the former belongs to the latter star, the computed place being that
		for 1850.0. Declination of former star not observed.
752	728	Weisse's Declination is 1' wrong.
756	731	The mean of three observations has been taken in Declination, although the range is 20".7
	73*	The notes read "excessively faint."
762	737	Baily's Right Ascension is about 278 too small. See Bonn VII, page 214. For proper motion see Bonn VII, page 51.
786	761	Weisse's Right Ascension is 1 ^m too small. See Positiones Emendatæ.
788, 838	763, 811	For proper motion see Bonn VII, page 51.
864, 865	837, 838	Both Right Ascensions belong to 4 Arietis, and the positions are interchanged.
869	841, 843	Both Declinations belong to the same star, the former of which is 1 revolution wrong.
872	845, 847	Declination of both, although differing 14", belong to the same star.
878	848	The Right Ascension is incorrectly reduced. It belongs to this star. The Declinatio
	545	is uncertain. If it belongs to 872 the setting must be changed 5' and 2 revolutions if to 876 it must be changed 5' and 1 revolution, making the Declination + 13' 39 9''.9 It may be, however, a faint anonymous star.
955	928	The sign of the Declination was copied wrong.
967	549, 940	The Right Ascension of the former is 1h wrong.
970	937	Right Ascension copied wrong. See Washington Observation for 1868, page 369.
978	950	Weisse's Right Ascension is 1 ^m too small.
997, 1153	968, 1116	One Declination of the former observation is incorrectly reduced. The other observa
1		tion was made on the Prime Vertical on January 4, 1849, and the Right Ascension
•		not reduced but recorded about 20m wrong. It belongs to the latter star.
999	970	Approximate Declination deduced from an Equatorial observation.
1015	986	For proper motion see Bonn VII, page 52.
1063	1032	The Declination is 1' wrong in the second edition.
1065, 1066	1033′	The Right Ascension and Declination belong to different stars. The Right Ascension of the former was reduced but not copied.
1075	1041'	Differs 18 from Weisse.
1801	1047	Weisse's Right Ascension is 108 too great.
1128, 1133	1091	Right Ascension and Declination belong to different stars.
+	1103	The Right Ascension is incorrectly reduced, and it is doubtful whether the same star
		was observed East and West of the meridian. See Prime Vertical Observations 1846 page 306.
1141	1104	Precession in Right Ascension computed wrong.
1153	968, 1116	There are three observations of this star in Declination. The other observation was
33	900,	made on the Prime Vertical January 4, 1849, about 20m wrong in Right Ascension
		See note to oor
1165	1128	See note to 997. The zones are reduced 1st wrong in Right Ascension.

New number.	Old number.	Remarks.
	1134	It is not certain whether this observation belongs to 1169 or 1170.
1188	1152	This observation differs 3 ^s from Weisse.
1196	1160	For proper motion see Bonn VII, page 55.
1256	1218	Precession in Right Ascension computed wrong.
1287	1259	The setting Circle seemed to be 15' wrong for all the stars during the night; it was corrected for all the other stars. The Right Ascension is also 1 ^m too great.
1325, 1327	1285, 1287	The Declinations of both belong to the latter star. The former is approximate.
1329	1289	Declination approximate.
1332	1292	Lalande 5490 and 5496 are observations of the same star. See Bonn VII, page 215. For proper motion see Bonn VII, page 56.
1333	1292'	Weisse's Right Ascension is 188 too great.
1334	1293	There is a mistake of 2' in reducing to 1860.0. Observations December 14, 1854, and December 23, 1868.
1355	1313	This is probably O. Arg. S. 2007. Argelander is probably 10' wrong in Declination and should be — 23° 43' 50''.5. Oeltzen is also copied 10° wrong.
1356	1314	One observation, that of November 30, 1866, has been changed 1 revolution. Resulting Declination is correct. Compared on the Equatorial with 1354.
1357	1314'	Oeltzen's Declination is too small by 18".7. See Bonn V, page viii.
1358	1315	Estimates of magnitudes vary from 6.0 to 8.0.
1382	1338	Differs 1º from Weisse. The star in first edition called Weisse 30 is Weisse 26, reduced 10º wrong.
1388	1344, 1345'	These observations belong to the same star.
1392	1342	The Right Ascension is I ^m too small. The recorded times are inconsistent, but 5 ^m is undoubtedly correct.
1416	1369	This position differs from Lacaille 18° and 6'. This result agrees with Stone and Gould.
1433, 1434	1385, 1386	Observed as one star in Declination.
1469		This was supposed to be Melpomene on January 24, 1864.
	1423	This was probably Melpomene, for it was never afterwards seen in that place. It was observed on set E and not corrected for motion. Its position was 3 ^h 19 ^m 27°.34 + 5° 1′, January 25, 1864.
1482		This was observed for Melpomene on January 27, 1864.
1490	1441, 1492	The latter observation was recorded 10° wrong in Declination, and 1 ^m wrong in Righ Ascension; it was also reduced 10 ^m wrong; 1490 was undoubtedly observed. The
		note in the observing book for December 21, 1870, says: "Another star, somewhat brighter, follows"; it was O. Arg. S. 2302. The star observed was DM. — 18°, 617
* 40#		The observing list also shows that this is the star that was observed on that date.
1497		This star was observed for Melpomene on January 29, 1864.
1512	1462, 1462'	These observations belong to the same star, the former being recorded 1° wrong.
1566	1515	The magnitude was only observed twice, and recorded 4.5 and 6.0.
1578	1526	This observation was reduced wrong in Right Ascension.
1581	1529	This observation was reduced wrong. The transits across different wires vary as much as 3°.
1582	1530	The reduced transits vary as much as 2°.
1584	1532, 1533	This star is not Rümker N. F., but Rümker.
1585	1534, 1535	Both observations belong to the same star.
1586	1539	The transits were observed over sets B and C, and not A and B, as reduced.
1606	1557-1559	These observations all belong to the same star.

New number.	Old number.	Remarks.
1607	1560, 1561	These observations belong to the same star. For the former observation the difference of micrometer reading with the comparison star was applied with the wrong sign. It this were combined with the following observation the Right Ascension would be 3 37 ^m 18°.50 and Declination + 23° 53′ 40″.5. There was also another Declination observation in 1864.
1611	1565, 1566	These observations belong to the same star.
1612, 1614	1568, 1570	For proper motions see Bonn VII, page 58.
1638	1591	This observation was probably compared at wire 3 and not at wire 4, as recorded.
1641	1573	The Right Ascension is 1 ^m too small.
1642	1521, 1594	These two observations are the same, identically, the former being copied 3 ^m wrong.
1667	1617, 1630	The latter observation seems to have been copied 25° wrong in Right Ascension.
1676	1536, 1626	These two observations are the same, identically, the former being copied 3 ^m wrong.
1687	1637, 1638	Both observations belong to the same star.
1695	1645	Right Ascens on reduced wrong.
1706	1655, 1660	These observations belong to the same star, the latter being incorrectly reduced to mea place.
1707	1656, 1661	These observations belong to the same star, the latter being incorrectly reduced to mea place.
1709	1658	The Declination was recorded wrong. It was observed on the same setting as 172
1711	1662	Right Ascension incorrectly reduced.
1714	1665, 1666	These observations belong to the same star. They are incorrectly reduced.
1724	1676, 1677'	These observations belong to the same star. The former one was observed on the same setting as 1714.
1732	1686	This star was incorrectly reduced in both Right Ascension and Declination.
1742	1694	Differs 3 ⁸ from Argelander, but agrees with Gould.
1751	1703	Differs 128 from Argelander, but agrees with Gould and Stone.
1768	1721, 1722	These observations 1-elong to the same star. The micrometer equivalent (19".71) for the former observation was applied with the wrong sign.
1772	1714	Right Ascension 1 ^m wrong. The Declination was also computed 1' wrong.
1788		This observation was omitted in the former editions.
1791, 1794	1743, 1745'	Both Declinations belong to the former star.
1797	1748	This star is also Transit Zones 157, 21, which is evidently 1 ^m wrong.
1806	1757	Weisse's Right Ascension is about 6 ⁸ too large, See Corrigenda.
1810	1761	Weisse's Right Ascension seems to be about 10s too large.
1811	1762	Argelander is 1' wrong in Declination. See Bonn VI, page [13].
1828	1776, 1777	Both Right Ascensions belong to the same star. The former Right Ascension was reduced with the wrong Declination argument.
1829, 1830	1778, 1779	Observed as one star in Declination.
1836	1784	Observed for 1833. Im late. Mistake in second edition.
1846	1795	Argelander's place must be corrected 3 or 4 seconds. See note in Zones.
1859–1861	1807′–1809	Declinations of the first and last of these belong to the middle star. Declination of the middle one belongs to the first star. The last not observed.
1862	1810, 1811	Both observations belong to this star.
1866		The observation was not copied in the annual volume.
1870	1813	Right Ascension recorded 1 ^m wrong.
1906	1850	One wire recorded 18 wrong. The two observations disagree by nearly 18. Yarna
		changed one of the observations 18. I have assumed that the other observation wa
		18 wrong, and this mean closely agrees with Gould and Stone.

New number.	Old number.	Remarks.
1936	1878′–1880	These observations all belong to the same star. The revolutions for the first not recorder
		and reduced 7 revolutions wrong. The middle observation was reduced 5' wrong.
1951	1894	There was another observation of this star not recorded.
1972	1915	Not in DM. There is a star in the DM, which has the same Right Ascension and 1°S
		but these observations are entirely consistent, and no doubt correct.
1991	1931	There is another observation on January 25, 1875, which disagrees about 12". No says very faint.
2010	1950	Reduced from 1870.0 to 1860.0, with the wrong sign in Declination.
2028	1968	For proper motion see Bonn VII, page 60.
2087	2024, 2026	Right Ascension of the latter and Declination of the former belong to this star.
2088	2026, 2027	The Right Ascension of the second and set A of the last, the Declination of the fir
	2033	and another observation in 1869, belong to this star.
2089	2028, 2029	Right Ascension of both and Declination of the former belong to this star.
2090	2029-2030	Right Ascension of the middle two and Declinations of the first and last, with anoth
	2032	observation in 1875, recorded 1 ^m wrong, belong to this star.
2092	2030, 2032	Right Ascension of the middle one and Declinations of the first and last belong to the
2092		
	2033	star.
	2033	This Right Ascension is incorrectly reduced. It was observed over sets A and E, t
		first of which belongs to 2088 and the other to 2095, which has already been included in the three observations.
2093	2034	There was another observation of this star in Right Ascension in 1869, incorrectly reduce
2094	2027, 2035	Right Ascension of the latter and Declination of the former belong to this star.
2095	2036	There appears to be another observation of this star on February 16, 1873, recorded
75		revolutions wrong. The observed time agrees exactly.
2103	2043', 2043''	Both observations belong to the same star. The former was recorded 2 revolutions wron
5	43 /43	and not put down in the Catalogue.
2120	2059, 2063	The Right Ascension of the latter star deduced from transits over wires II-VI. T
2120	2039, 2003	transits were probably observed over wires I-V. On this hypothesis the deduc
	2062 2066	Right Ascension becomes 4 th 44 th 48 th .79, agreeing with former.
2126	2063, 2066	Right Ascension of the latter and Declination of both belong to this star.
2131	2070'	Declination approximate.
2151	2090	Argelander is I' wrong in Declination. These results agree with each other and a
		with Gould.
2160	2098	Mean Year in Right Ascension was intended for 61.6, but another observation was ma
		in 1877.
2173, 2175	2110	Right Ascension and Declination belong to different stars. The other co-ordinates we observed but not published.
2177	2113	Declination approximate.
2179	2115, 2116	Both observations belong to the same star. Declination of the latter was recorded wron
2181	2118	Differs about 8' from Lacaille in Declination.
2189	2126	Declination recorded wrong.
2196, 2197	2133, 2134	Right Ascension of both belong to the first star. One Declination was set 1° wron
90, 2.9/	2133,2134	and therefore another star was observed.
2108	2125 2722	
2198	2135, 2139	Both observations belong to the same star. The latter was incorrectly reduced to me
2226	276	place.
2226	2164	Not in DM. It is undoubtedly correct. Observed on Equatorial February 2, 1888.
	10	it variable?
2229	2168	The four observations in Declination have a range of about 9".

New number.	Old number.	Remarks.
2231, 2232	2170	Right Ascension and Declination belong to different stars. Observed on Equatoria March 12, 1877. Argelander's two observations differ 18 and 28 from 2232.
2240	2178, 2187	Both observations belong to the same star, the latter being recorded 1 ^m wrong, but there are only thirteen observations altogether in Right Ascension.
2242	2180	Weisse's Right Ascension is about 168 too large. See Positiones Emendatæ.
2261	2220	There is a mistake of 1' in reducing to 1860.0.
2271	2209	Mistake of sign in Declination.
2281	2219	Weisse's Right Ascension is 16 ⁸ too large. See Positiones Emendatæ.
2286	2222, 2225	The former observation was copied 208 wrong. Both observations belong to the same star.
2288	2227	Declination in the zones uncertain. This position agrees with Gould V, 473.
2299	2234	Right Ascension copied 1 ^m wrong. There were two observations of this star in 1849 and only the wrong one was copied.
2303	2242	Weisse's Right Ascension is about 12" too small. See Positiones Emendatæ.
2309	2247'	Declination approximate.
2315	2253	Declination was observed on the Prime Vertical on February 22, 1850, and belongs to Weisse (2) V, 748, whose Right Ascension is 5 ^h 26 ^m 6 ^s . It is incorrectly reduced.
2319	2256′	There was another observation of this star in Declination on January 24, 1874, incorrectl reduced. On page 185, Washington Observations for 1874, Apparent Zenith Distance should be North.
2320	2257, 2262	Right Ascension of both and Declination of the former belong to this star, the latter of servation being recorded 1 ^m wrong.
2321	2257', 2262'	Right Ascension of the former and Declination of both belong to this star. In Wash ington Observations for January 24, 1874, page 185, the zenith distance of the latter should be North, and belongs to the former star.
2326	2262'	No Declination of this star observed. See previous note.
2327, 2328	2263, 2264	Observed as one star in Declination.
2329	2264′, 2265	Right Ascension of both and Declination of the former belong to this star. Declinatio of the latter belongs to Weisse V, 763 and 764, which is incorrectly reduced.
2332	2272'	Mistake in reducing to 1860.0. Declination approximate.
2334	2269	Declination recorded wrong.
2350	2286	There is no such observation in Right Ascension. The given Right Ascension aros from a mistake in the reduction of 2355. It was afterwards corrected, but not erase from the results.
2361	2297, 2298	Right Ascensions of both belong to this star. The observing books show that the set ting was —13° 19' for all the observations but one, and that one was written in in and probably copied.
2386	2311	There is a mistake of 1 ^m in reducing to 1860.0.
2389	2325, 2325′	Both observations belong to the same star. There are only three observations in Righ Ascension, January 31, 1861, January 31, 1876, and February 2, 1877. The last on has not been copied.
2391	2327	The Right Ascensions of Lalande 10575 and 10590 are interchanged in Lalande. Se Bonn VII, page 214.
2424	2360', 2363'	Right Ascension of the former and Declination of both belong to this star, the Declination of the latter being only approximate.
2426	2361', 2362'	Both observations belong to the same star. There was a mistake of 2 ^a in the reductio of the latter, and also 0 ^a .3 in reducing from 1877.0 to 1860.0.
2435	2370	For proper motion see Bonn VII, page 62.
2439	2373	Mistake in copying precession in Right Ascension.

New number.	Old number.	Remarks.
2446	2378, 2382	Right Ascension of both and Declination of the former belong to this star.
2448	2381	Right Ascension differs from zones about 18.5, but agrees with Gould V, 1460.
2449	2382	Right Ascension approximate. See previous note.
2470, 2471	2404, 2405	Magnitudes and Declinations are interchanged. Two mistakes have been corrected.
2489	2423	There was a mistake of 16 in taking the mean.
2490	2424, 2437	Right Ascension of the former and Declination of both belong to this star. There was also a mistake of 10" in one of the observations.
	2424	Mistake of 10'. Observed on same setting with 2516. See note.
2500	2434	Right Ascension of both and Declination of the former belong to this star.
2511	2447, 2448	Right Ascension of the latter and Declination of both belong to this star.
2514	2448, 2452	Right Ascension of the farter and Declination of both belong to this star.
2515	2453, 2456	Right Ascension of the latter and Declination of both belong to this star, the latter
2516	2449, 2454	being read 10' wrong.
2528, 2540	2478	This observation belongs to different stars. There is also a mistake of 1 ^m .
2530	2468	Declination approximate.
2537	2475	There is a mistake of about 30s in Baily's Lalande. See Bonn VII, page 218.
2540	2478	There was no Declination of this star observed. See previous note.
2543, 2544	2481, 2482	Observed as one star in Declination.
2578	2517, 2518	Both observations belong to the same star. There is a mistake of 3 revolutions in th
		latter observation on February 2, 1868; revolutions recorded both 26 and 29, th former being correct.
2594	2630'	Differ 18 from Oeltzen.
2602	25.38	Oeltzen's Right Ascension must be increased 10st. Mistake in reducing Argelander.
2610	2540, 2546	Both observations belong to the same star. The minute of the former is queried in observing book.
2626	2560′	Declination approximate.
2634	2568, 2569	Right Ascension of both and Declination of the former belong to this star.
2636	2569	Right Ascension not observed. See previous note.
2661, 2662	2594, 2595	The Right Ascensions and Declinations of these two stars are interchanged.
2665	2598	This observation was intended for Lalande 12053, but the Circle was set 10° wrong.
2005	2390	has been re reduced, and corresponds to Leiden Zones 156, 71. Right Ascensio
2671	2603	approximate. Circle set 10° wrong. It has been recomputed. Right Ascension approximate.
•	2609	Declination approximate.
2676 2689	2623	One observation was 2 st wrong in Right Ascension and the other changed 2 st .
2692		This observation was not copied in the annual volume.
	2635'	Declination approximate.
2705	2639, 2642	Both observations belong to the same star. One observation of the former recorded 11
2710	2039, 2042	wrong and the other changed.
2711	2641, 2643	Both observations belong to the same star. One observation of the former recorded 11 wrong and the other changed.
2712	2644	There was another observation in 1869, which was 108 wrong.
2729	2661	Right Ascension approximate.
2743, 2756	2675	Right Ascension and Declination belong to different stars. Baily's position for the former is 4° wrong in Declination. See Bonn VII, page 219. Yarnall's Declination belongs to the latter star, which is incorrectly reduced.
0761 077	2691', 2704	Declinations approximate.
2761, 2775 2785, 2786		Right Ascension and Declination belong to different stars, as shown by the Circle set
2/05, 2/00	2714	right Assension and Decimation belong to different state, as shown by the Chicle set

New number.	Old number.	Remarks.
2794	2722	Lamont's observation is copied 10' wrong in Declination.
2805	2733	This is also Mural Zones 231, 21, both of which are evidently 1 ^m too great in Right Ascension. This observation is recorded on the Chronograph, and also agrees with Gould's zones.
2827	2755, 2756	Both observations belong to this star. The former, by mistake, was recorded 5° wrong. When properly reduced the Right Ascension becomes 6 ^h 43 ^m 49 ^s .68.
2828	2757	One observation in Right Ascension, which belonged to this star, was credited to the following star, being reduced with the following Declination. It was, however, observed on the same setting as the preceding star.
2829	2758	See preceding note.
2837	2768	Declination approximate.
2843	2774, 2776	There was a mistake of 10" in taking the mean in the former observation, and both Declinations belong to the same star.
2845	2760, 2776, 2777	The Right Ascension of the middle observation and the Declinations of the other two, which are wrongly combined, belong to this star.
2846	2760, 2777	These Declinations have been wrongly combined. See preceding note.
2847	2779	The records and reductions are consistent, and apparently correct. The result, however, is I revolution different from Argelander, Gould, Mural zones, and Transit zones, which closely agree. The Declination has therefore been changed I revolution = 31".3.
2849	2780	Right Ascension approximate. Deduced from Gould.
2854	2771, 2785	Both Right Ascensions belong to this star, the former being recorded 2 ^m wrong.
2856	2787	No Declination observed. Given Declination belongs to 2862.
2858	2789	It is not known to what star the given Right Ascension belongs, for this and the following star are not more than 7 ^s apart in Right Ascension, although they appear to have been observed 9 ^s apart in 1877. They are, however, probably different stars.
2862	2787, 2793	Right Ascension of the latter and Declination of both belong to this star.
2865	2797	This was observed for the next star, and set 10° wrong.
2866	2796, 2797 2798	The first Declination is correct, the second reduced 10° wrong, and the last 1° wrong. Resulting Declination should be — 28° 46′ 22″.2.
2870	2802	This is No. 8656 in Gould's General Catalogue, and probably Mural Zones 231, 28, where the transits should be over wire IV, instead of V, and the Right Ascension of the zones must be decreased about 18 ⁸ .
2871	2803, 2804	Both observations belong to the same star, the former being reduced 10° wrong; the former Declination properly reduced becomes — 28° 51′ 32″.3.
2875	2808	For proper motion see Bonn VII, page 63.
2882	2815'	Declination approximate.
2902	2833′	Right Ascension approximate.
2907	2838, 2840	Right Ascension of both and Declination of the latter belong to this star.
2909	2837, 2842	Right Ascension of the latter and Declination of both belong to this star.
2931	2865	Given Right Ascension should be 7 ^h 1 ^m 47 ^s .68, and belongs to a star whose Declination is probably — 25° 49′± as determined from an Equatorial observation on March 6, 1888. There was a mistake of 10 ^s in reduction.
2932, 2933	2862, 2863	Stone identifies the former with Lacaille 2623. Yarnall identifies the latter with the same star. Lacaille probably made a mistake of I ^m ingress or egress, and 2927 probably corresponds with Lacaille. See also Gould's General Catalogue.
2936	28561, 2867	Right Ascensions of both belong to this star, the former being 1 ^m wrong.
2945	2876	There was a mistake of 1' in reducing to 1860.0 or in copying.
2954	2885	9

New number	Old number.	Remarks.
2956	2886, 2889	Right Ascensions of both belong to this star. Revolution of first star is probably 29.
2957, 2963	2895	Time recorded 1 ^m wrong for the given Declination, and the Declination wrong for the given Right Ascension.
2958	2890	Reduction from 1870.0 to 1860.0 was applied with the wrong sign.
2967	2899	The mean place for 1870.0 in the observations for 1869 is copied 3" wrong, and 3 wire out of 11 on January 5, 1870, are recorded 10s wrong.
2970	2902, 2903	It is assumed that the latter observation was I revolution wrong in Declination.
2992	2922, 2925	Both observations belong to the same star. Time recorded 15 ⁸ wrong for former observation.
2997	2940'	Time recorded 1m wrong.
3011	2938, 2943′	Right Ascension of the former, which is recorded 45° wrong, and Declination of the latter belong to this star.
	2949	There is no such star in this place. It was probably observed for DM. + 41°, 1638, o March 21, 1846. There seems to be a number of mistakes on that day, but the
		have not been collected in the Catalogue.
3019	2952, 2953	The former star was reduced to mean place in Declination with the wrong argument.
3021	2956, 2957, 2958	The first was reduced 1 revolution wrong, and the last is the apparent place for 1858.2
3022	2955, 2957,	The Right Ascension of the middle observation and the Declination of the first and last
	2960	belong to this star; the first Declination is the apparent place for 1858.2, and the last is copied 1° wrong.
3024	2961, 2962	Right Ascension of both and Declination of the former belong to this star.
3026	2962	No Right Ascension of this star observed. See preceding note.
3029	2966, 2975	Right Ascension of both observations belong to this star, the latter being 1m wrong.
3044	2982	The mean of two observations in Right Ascension and two in Declination gives the magnitude 8.0.
3059, 3060	2995, 2996	The Declinations of these two observations are interchanged.
3077	3004	Mistake of 1 ^m .
3109	3042	Mistake of 14° in copying.
3119, 3122	3055	Observed Right Ascension and Declination belong to different stars, the Declination being reduced 5 revolutions wrong. Setting for the other star 5° different.
3120	3053,.3054	Right Ascension of both and Declination of the latter belong to this star, the Right Ascension of the former being reduced with the wrong argument.
3121	3053	The Declination of this star only was observed. See preceding note.
3122	3055	The Right Ascension belongs to this star, the Declination being recorded about 5° wrong as shown by wire intervals.
3125	3065	The two observations differ by Im. The wrong one was copied.
3134		This observation is not copied in the annual volume.
3175	3106	This is also Mural Zones 230, 4, which is 38 wrong.
3182	3108, 3115'	Both observations belong to the same star; the approximate Right Ascension of the former being about Im wrong.
3187	3115, 3120	Both observations belong to the same star, the approximate Right Ascension of th former being wrong.
3192	3125	One observation in the first edition was changed I revolution. See 3126, first edition.
3196	3130	A small error in Declination. The Right Ascension in the Transit zones appears to be $1^{\rm m}$ in error.
3228	3161	The Right Ascension is correct, although the observation on March 12, 1864, was reduced 1s wrong.
3244	3181	This is probably a small star, observed 1 revolution wrong. It is about 21" North of 324. The original record is somewhat suspicious. It has therefore been changed 1 revolution

New number.	Old number.	Remarks.
3246	3179	This was intended for 3232, and set 1° wrong.
3248	3184	This is probably the second star of a pair, and agrees with Gould 10198. It may, how ever, be the mean of Gould 10196 and 10198.
3249	3177, 3195	The former observation was reduced to 1860.0; 10s wrong, the latter one probably rea 50s wrong. The two observations belong to the same star.
3264	3198, 3199	Both observations belong to the same star. The micrometer equivalent for the latt observation was applied with the wrong sign; when corrected the Declination becomes + 0° 25′ 52″.1, agreeing with the former observation.
3270	3206	For proper motion see Bonn VII, page 64.
3271	3207, 3208	Right Ascension of the former and the Declination of both belong to this star, the latter being recorded 20° wrong.
3273	3208, 3211	Right Ascension of the former and Declination of the latter belong to this star.
3275	3210', 3211	Right Ascension of both and Declination of the former belong to this star.
3280	3216, 3218	Both observations belong to the same star, the former being recorded 20° wrong.
3282	3215, 3219'	Right Ascension of the latter and Declination of the former belong to this star.
3285	3222	This is also Mural Zones 159, 77, which is reduced 6s wrong.
3310	3247	The Right Ascension of this star was not copied. Given Right Ascension belongs 3312.
3312	3247, 3248/	The Right Ascension of the former and the Declination of the latter belong to this sta
3350	3284'	Declination approximate.
3358, 3359	3291, 3292	The names are interchanged, and Weisse (2) is put instead of Weisse.
3361, 3368	3294, 3301	The names should be Weisse, and not Weisse (2).
3397	3329	Declination approximate.
3401	3334	For proper motion see Bonn VII, page 65.
3408	3339'	Name should be Weisse, and not Weisse (2).
3425	3355, 3356	Declinations of both belong to this star, the former being reduced 1' wrong.
3433	3364, 3365	Right Ascensions of both and Declination of the former belong to this star.
3434	3365	Right Ascension not observed. See preceding note.
3466, 3467	3397, 3398	vt is probably 28 Cancri, and v2 is probably 30 Cancri.
3472	3405	This was intended for 3474, and the Declination Circle set about 40' wrong. T Right Ascension is deduced approximately from the time in observing book.
	3407	Declination belongs to 3512; it was recorded about 5 ^m wrong. Observed Right A cension was intended for 3477, and the Circle probably set 10° wrong; if so the Rig Ascension is 8 ^h 19 ^m 11 ^s .37 and Declination + 50° 24′. Only observed over set C.
3478	3409	There is probably a mistake in Lacaille of about 12" in Right Ascension and 4' in Decnation.
3481	3412	There is probably a mistake in Lacaille of about 10s in Right Ascension and 4' in Decination.
3487	3417	Lacaille seems to be about 1' wrong in Declination.
3496	3426	Weisse's Right Accension is 10" too great. See also Bonn VI + 12°, 1854.
3501	3431	This is probably v^2 Cancri, but there is so much confusion in these names that the Flamsteed numbers have been used.
3512	3407	The Right Ascension was recorded about 5 ^m wrong. See previous note.
3527	3456	Argelander's Right Ascension is too great by 10s. See Gould VIII, 2334.
3530		This star was omitted in the previous editions.
3537	3464'	The Right Ascension in the zones is 1 ^m too great.
3541,3544	3465, 3469	Right Ascensions approximate.
	3475	There is no star in this place. Record seems all right and reductions correct. Perha a small planet.

New number.	Old number.	Remarks.
3556	3483	Apparently a mistake in printing precession in Right Ascension.
3567	3494	Right Ascension approximate.
3600	3533	There was no second recorded in the observing book.
3609		This star was omitted in the previous editions.
3616, 3639	3541, 3564	Declinations approximate.
3648	3572	There was a mistake of 2' in copying.
3654, 3655	3578, 3579	For proper motions see Grant, page XLIII.
3656	3580, 3584	Both observations belong to the same star, the latter being I revolution wrong.
3660	3585	Right Ascension approximate.
3687	3612'	Declination approximate.
3692	3616', 3617	Both Declinations belong to the same star, although more than 14" different.
3693	3617	Declination not observed. See previous note.
3696, 3744	3620, 3667'	Declinations approximate.
3761	3684	Baily has named 46, 47, and 51 Cancri σ^1 , σ^2 , and σ^3 , but σ probably belongs to 51, 59, and 64 Cancri.
3787	3710	For proper motion see Bonn VII, page 66.
3793, 3796	3716'	Right Ascension and Declination belong to different stars, 20' apart in Declination.
3800	3718	There was a mistake of 1 ^m in taking the mean.
3810		This does not agree very well with the zones, but agrees well with Gould VIII, 3692.
3814	3732	Transit zones Im wrong.
3818	3736	Probably the first of a pair. Examined with the Equatorial February 14, 1888.
_	3740	Declination approximate.
3823 3825	3745	
	3747	There was another observation on February 26, 1869, reduced 1 revolution wrong.
3826, 3827	3748, 3749	Both Right Ascensions belong to the north following star.
3836, 3838 3847	3758 3768, 3768'	Right Ascension and Declination belong to different stars. Both observations belong to the same star. There was a mistake in reducing the former to mean place.
3849, 3854	2770	to mean place. Right Ascension and Declination belong to different stars, the former being recorded 1°
	3770	wrong, as shown by the wire intervals. Declination also reduced 20" wrong.
3867	3787	Given Right Ascension belongs to 3873, being reduced 105 wrong.
3873	3787, 3792	Right Ascension of both belong to this star, the former being reduced 10s wrong.
3878	3797	Weisse's Right Ascension is 10s too great. See also Schjellerup 3311.
3880	3799	Observed Right Ascension belongs to a star whose Declination is about 28° 50′, as determined by the wire intervals.
3944, 3945	3860, 3861	For proper motion see Bonn VII, page 67.
3969	3884	Right Ascension approximate. It is Gould VII, 765.
3970	3885	The observation in 1864 was reduced to mean place 10" wrong, and one term in the reduction to mean place in Declination was applied with the wrong sign for the observation in 1866.
2000 2002	2006 2007	servation in 1866.
3990-3993	3906, 3907	There are four stars. Right Ascensions and Declinations belong to different pairs of stars.
3994	2025 5-20	This star seems to have been omitted from previous editions.
4024	3937, 3938	Both observations belong to the same star, the latter being copied 6' wrong.
4050	3964	Declination copied with wrong sign.
4061	3966, 3976	Right Ascension of the latter and Declination of the former belong to this star.
4067	3976	Declination belongs to this star. Right Ascension not observed.
4094	4005	Right Ascension approximate. No time noted.
4102	4013	There is only one observation of this star in Right Ascension. The other observation is on
		the Chronograph sheet, and 3º later. It could not be this star, for there were three stars ob-
		served on the same run, and supposed to belong to 4102, 4120, and 4136, respectively,
		the first one being 3 ⁸ late, the next, in which the time agrees, and the last one 5 ⁸ late.

New number.	Old number.	. Remarks.
4105	4016	This observation was recorded and reduced 10° wrong.
4116	4026	There was a mistake of 2 ⁸ in reducing to 1860.0.
4117	4027, 4028	Both observations belong to the same star. Wire intervals show conclusively that the former Declination is a mistake. On being reduced with the latter Declination as a argument, the Right Ascensions are exactly the same.
4120	4031	Only one observation of this star in Right Ascension. See note to 4102.
4129	4041	The zones are reduced 1' wrong.
4136	4047	Only one observation of this star in Right Ascension. See notes to 4102 and 4120.
4161	4071	This is also Transit Zones 220, 68, which is 1' wrong. The Declination of center of belt in the zones should be -36° 33' instead of -36° 53'.
4172	4081'	Declination approximate.
4174	4083	Right Ascension approximate. It was intended for 4171, but set 30' wrong.
4178	4078, 4086′	Both observations belong to the same star. Right Ascension of the former read of 50s wrong.
4181	4090	Weisse's Right Ascension is 308 too small. See Positiones Emendatæ.
4184	4093	No Declination of this star observed. Given Declination, which is copied 20' wrong belongs to 4186.
4185	4088, 4092'	Both observations belong to the same star, the Right Ascension of the former being 40 wrong.
4186	4093, 4094	Declinations of both belong to this star, the former being copied 20' wrong.
4194,4195,4196	4102, 4103	The first and second star, as well as the mean, were all observed.
4205	4111'	The Declination was observed on March 22, 1875, but not copied.
4210	4114, 4117	Both observations belong to the same star. Seconds of Right Ascension for the forme observation were incorrectly reduced, and there was a mistake of 10 revolutions i Declination.
4214	4120	There was a mistake of 1' in Zenith Distance in 1871, and the other observation was copied from this.
4215, 4218	4121,4125	Weisse's Right Ascensions are 5° too great. See Positiones Emendatæ.
4224	4131	Declination in DM. seems to be 10' too great.
4242	4149	This observation was reduced to 1860.0, 1' wrong.
4246	4153	The zone observations are reduced 1' wrong.
4257	4164	There is a mistake of 28 in reducing to 1860.0.
4264	4171, 4183	Both observations belong to the same star. Time was reduced wrong for the latte observation.
4265	4172	There is a mistake in Stone's Cape Catalogue for 1880. Stone's 5425 is the same a Lacaille 4107, whereas he identifies his number 5445 with the latter. Holden, in his List of Errata, A. N. 2561, also makes the same mistake.
4269	4177, 4179	The observation of the former, made in 1856, was probably I revolution wrong, and belongs to 4273. The time agrees. The other observation made in 1869 had neither revolution nor time recorded, and is not included in the results. Another observation made in 1872 was correct, but not collected by Yarnall, and the latter observation belongs to this star, which was recorded I revolution wrong. The time was also reduced about 128 wrong for this latter observation.
4285	4194	For proper motion see Bonn VII, page 65.
4291	4200	There is a mistake of 18 in reducing the precession in Right Ascension.
4312	4221.	The zones are reduced 10' wrong.
4330	4238	One Declination observed in 1869 differs about 33" from the mean of the other three
4 2		This was changed I revolution by Yarnall. Mural Zones 8, 16, and Meridian Circle Zones 168, 78, however, agree very closely, but differ about 10" from Yarnall. There
		can be no doubt, however, that this position is correct.

New number.	Old number.	Remarks.
4377	4285	There was a mistake of 28 in reducing observations in 1869.
4385	4292	Declination approximate.
4418	4324	This observation was recorded 1° wrong. Lalande 20170 was observed once on the
		same setting.
4422	4328	Mistake of 1' in reducing to 1860.0. Only two observations, April 20, 1871, and April 13, 1872.
4458	4363, 4366	Declination of the latter observation is 4 revolutions wrong. Time also reduced wrong
4467	4372, 4372'	Both observations belong to the same star.
4491	4395	Declination approximate. Given Declination belongs to 4564, which is 10 ^m later.
4501	4406	The zones observations are probably 1m wrong. Gould agrees with Yarnall.
4505	4410, 4411	Both Right Ascensions belong to the same star, the former being reduced 10s wrong. The Declination was not observed.
Aron	4477 4472	Right Ascension of the latter and Declination of the former belong to this star. The
4500	4411,4412	Mean Year in Right Ascension was also copied wrong.
4509	4415	The zone observations are probably 20s wrong.
4518	4423	Right Ascension approximate.
4521	4427, 4428	Both observations belong to this star, the latter approximate Declination being about 20' wrong.
4564	4395, 447 1	Both Declinations belong to this star. The time for the former observation recorded 10 ^m wrong.
4566	4473	There was a mistake of 30" in reducing to 1860.0.
4578	4484'	Declination approximate.
4621	4527	For proper motion see Bonn VII, page 71.
4645	4551	This is Gould X, 3472. The Mural zone observation appears to be 28 wrong.
4653	4559	The Meridian Circle zone give the Declination —30° 24′ 1″.0; Mural Zones — 30°
		24' 4".5; Gould's — 30° 24' 12."1, when reduced to 1860.0. Is there a proper motion?
4687, 4694	4598	Right Ascension and Declination belong to different stars. The Right Ascension belongs to a northern star and copied 1 ^m wrong. The observed Declination is South and belongs to a star whose Right Ascension is 10 th 53 ^m 10 ^s . The Mean Year is also copied wrong.
4707	4611,5030	The zones are reduced 10 ^m wrong. The latter observation was copied 1 ^h wrong.
4711	4615	For proper motion see Bonn VII, page 72.
4720	4624	Lalande's Declination of 21223 is 4' wrong. See Bonn VII, page 223. It is the same as this star.
4727	4631	For proper motion see Bonn VII, page 72.
4748	4651, 4653	Both observations belong to the same star. One observation of the former was reduced 10s wrong and the other changed.
4759, 4760	4663, 4664	Observed as one star in Declination.
4768	4672, 4673	The former observation was intended for 4773, but set wrong.
4773	4678	Mistake of sign in copying Declination.
4774	4679	This was intended for 4772 but set 30' wrong. Declination has been determined from wire intervals.
4781	4686	There is an error in Oeltzen. See Bonn V, page xx.
4786, 4787	4691, 4692	Observed as one star in Declination.
4788, 4798	4693	Right Ascension and Declination belong to different stars.
4789	4694	Precession in Right Ascension copied wrong.
4790	4695	Weisse's Declination is 10° too small. See Corrigenda,

New number.	Old number.	Remarks.
4841,4842	4744, 4745	The latter star named wrong; precession in Right Ascension wrong, and Declinatio interchanged. There was another observation of the preceding star on the Prin Vertical in 1846.
4883	4785	This star was observed by Lalande, Wollaston, Groombridge, Schwerd, and Carringto and seems to have a proper motion of about o*.1 annually and a small motion Declination.
4899	4801	This is probably Meridian Circle Zones 95, 50 observed 1 wire wrong in Right Asce sion. It differs from this and also from Gould XI, 1728, about 14" in Declination The observations are consistent.
4929	4831	This is also Mural Zones 9, 47, in which the Right Ascension is about 19 ⁸ wrong. The middle wire was probably 42 ⁸ .8. Yarnall is right.
4935	4837	Argelander seems to be about 2' wrong.
4950	•4852	This was a mistake in name, v instead of v Leonis.
4952	4854	Declination approximate.
4953	4855, 4862	Both observations belong to the same star, the latter being 1m wrong.
4955	4858, 4871	Right Ascension of the former and Declination of both belong to this star.
4965	4870, 4871	Right Ascension of both and Declination of the former belong to this star.
4973, 4977	4879	Right Ascension and Declination belong to different stars.
4976	4882	Declination approximate.
	4901	This is evidently wrong. The wire intervals show that the star is near the Equator; reducing it for the following star the Right Ascension becomes 11h 36m 9º.72.
4997	4901, 4902	Both Right Ascensions appear to belong to this star. Right Ascension of former copi wrong.
5027	4932	For proper motion see Gould 16103.
5028	4933, 4939	Right Ascension of former and Declination of both belong to this star. Time also agree
5031	4936	Another observation of this star in Declination on May 15, 1871, was recorded 2° wron
5034	4939, 4944	Right Ascension of the former and Declination of the latter belong to this star.
5042	4949	Another observation of this star in Declination on May 15, 1871, was recorded 2° wron
5046	4946	Right Ascension of this star recorded 1 ^m wrong. Minute was ambiguous on sheet.
5048	4954	This star, according to Mædler, has a proper motion of $+ o^{s}.050$ and $- o''.292$.
5059	4965	This star has a very large proper motion.
5080	4987	There appears to be some mistake in the Declination observation, for there is no stathere. From the Mural Circle book the time for this observation appears to be 1 48 ^m 23 ^s , and observation uncertain. The Declination that corresponds to the giv Right Ascension, as determined by the wire intervals is 32° 40′. This position agree with Mural Zones 11, 39. There is no star in the given position, and it is altogeth uncertain to what star the given Declination applies.
5093	4999	There is a mistake of 1' in reducing to 1860.0.
5095	5001	This star has a proper motion of — 0 ^s .077 and — 0''.61.
	5030	This observation belongs to 4707. It was copied 1h wrong.
5126	5031/	For proper motion see Bonn VII, page 75.
5130	5035	Lamont's Declination needs to be corrected by + 1'.
5134	5039	There is probably some mistake in Lacaille. The difference between Yarnall and L caille is about 8s in Right Ascension and 1'.5 in Declination.
5142	5046	The zones are apparently about 15 ⁸ wrong. Probably wrong wires recorded.
5145	5049	This is Lacaille 5015, although Holden says it is Lacaille 5022. Stone also makes the same mistake; he also identifies his numbers 6730 and 6746 both with Brisbane 391. Stone's 6746 is identical with Lacaille 5015.

New number.	Old number.	Remarks.
5164	5068	One observation in reduction to mean place was applied 10" wrong. This is also Transit Zones 6, 22 and 228, 3; they differ by over 2". The mean agrees with Yarnall.
5186	5091'	Precession in Right Ascension wrong.
5199	5104	This was observed as a separate star by Bessel; the Weisse name is therefore preferred
5200	5104', 5105	The Right Ascension of the latter and the Declination of the former belong to this star Weisse's Declination is about 1' wrong. See Schjellerup.
5204, 5211	5116	Right Ascension and Declination belong to different stars.
5209	5112	This is Gould XII, 622, and has the same Declination exactly as 5213.
5222	5125	Weisse is 1° wrong in Declination. See Positiones Emendatæ.
5241	5144, 5146	The time for the latter observation is reduced 21° wrong. The Declination Circle was also 15' wrong for the whole day. All the other observations were corrected.
5247	5152	This position differs from Lacaille about 15° in Right Ascension and 5' in Declination.
5274	5177	This star was wrongly named.
5299, 5300	5202, 5203	These observations were wrongly combined.
5339	5241	Declination approximate.
5342	5243	Declination was intended for 5351, and observed about 1 ^m early.
5346	5247	The first edition was correct. The later observation also agrees with it.
5367	5266′	No Declination observed.
5370	5269	There seems to be no good authority for calling this star variable. It is 6.7 magnitude
5372,5373	5271, 5272	Observed as one star in Declination.
5417, 5421	5316, 5320	Weisse's Right Ascension seems to be about 10s too small.
5464	5360	Weisse's Right Ascension seems to be about 10s too small. For proper motion see Bons VII, page 78.
5470	5366, 5367	Right Ascension of both and Declination of the former belong to this star.
5473	5370, 5374	Right Ascension of the latter, which is 1 ^m wrong, and Declination of the former, belong to this star. Right Ascension of the former is possibly a 10th-magnitude star. Transi
		Zones 6, 41 set 1° wrong, but uncertain. Declination of the latter star probably belongs to 5480, set 10' wrong.
5476	5367, 5373	Right Ascension of the latter and Declination of both belong to this star, the former being copied from the observing books 5' wrong.
5478, 5479	5376, 5377	Observed as one star in Declination.
5503, 5504	5401	Right Ascension and Declination belong to different stars.
5508	5405	Differs 2 ⁸ from Transit zones. The observations are consistent, but could not find Chronograph sheets.
5513	5410	For proper motion see Bonn VII, page 78.
5551	5448	Declination approximate.
5554	5451	A slight mistake in computing precession in Right Ascension.
5562	5459	There is some confusion in the name of this star. Flamsteed incorrectly identified in with g.
5580	5477	Differs 3' from Weisse.
5582	5479	Weisse is 15' wrong in Declination. See Positiones Emendatæ.
5620	5517	For proper motion see Bonn VII, page 79.
5629	5526	Declination has wrong sign.
5632	5529	For proper motion see Bonn VII, page 79
5636	5532'	Right Ascension approximate.
5679	5574	Declination approximate.
5681	5576, 5577	Both observations belong to the same star, as shown by the wire intervals, the Declination of the former being recorded wrong.
		trong or the totaler point totaler and the totaler

New number.	Old number.	Remarks.
5694	5589	Lalande's Right Ascension is 1 ^m too great.
5711	5606	This is also Transit Zones 11, 39, which is 1' wrong in Declination.
5721	5617	This is also Mural Zones 112, 51.
5727	5623	There is an error in Argelander. See Bonn V, page XXII.
5735	5630, 5631	Both observations belong to the same star, the former observation being recorded 10 re-
		olutions wrong.
5744	5640	The zone observation is probably 28 wrong.
5766	5661	This does not appear to be a Lalande star. The Lalande star is 5769.
5769	5664	For proper motion see Bonn VII, page 81.
5816	5711	Declination approximate.
5824	5719	This is also probably Mural Zones 17, 6, observed over wires II and III instead of I and V.
5856	5750, 5751	All three observations belong to the same star, the middle one being recorded 5 revolu
	5751'	tions wrong.
5866	576t .	Baily's Right Ascension in B. A. C. is 30s too small.
5872	5767, 5768	Right Ascension of both and Declination of the former belong to this star. If this
		Mural Zones 242, 76, there is an error of 5 revolutions = 5' 17".8 in the zones obsevation. This position agrees with Gould's zones and with the General Catalogue.
5875	5768, 5772	Right Ascension of the latter and Declination of both belong to this star, the latter being reduced 20" wrong.
5884	5781, 5788	Both observations belong to the same star, the latter being In wrong.
5885	5771, 5781'	Both observations belong to the same star, the former being Im wrong.
5890	5786	This is also Mural Zones 15, 9, in which the Right Ascension is 20s too great.
5893	5790	This is also Mural Zones 14, 10, that observation being 1' wrong in Declination.
5896	5793, 5794	Both observations belong to the same star.
5906	5804	In the zone observation the transits should probably be over wires II and III instead III and IV.
5913	5811	Wrong name.
5917	5814', 5815,	These observations all belong to the same star, the first one recorded 9 revolutions wrom
	5817	(30 instead of 39); the last is incorrectly reduced in Right Ascension, and is the san observation as the first.
5922	5821	Lalande appears to be 1 ^m wrong in Right Ascension. It is Weisse (2) XIII, 1288.
5938	5831	Yarnall's Right Ascension is 1 ^m too small. It is also copied 2° wrong in Declination
5949, 5952	5849	Right Ascension and Declination belong to different stars.
6014, 6015	5911, 5912	Observed as one star in Declination.
6020	5917	Differs about 2 ⁸ from Weisse.
6031	5927'	Declination approximate.
6033	5929	Declination copied 10' wrong.
6065	5956	Right Ascension 1 ^m too small.
6103, 6104, 6109	5996′, 5996′′, 6001	Declinations approximate.
6129	6019, 6019' 6023	Right Ascension of the last and Declinations of the first and second observations belon
6133	6023, 6024'	to this star, the second observation being recorded 1 revolution wrong.
6177	6067, 6072	Right Ascension of the latter and Declination of the former belong to this star. Right Ascension of the former and Declination of both are supposed to belong to this star.
6185	6072	star, the latter being recorded 1 revolution wrong. Right Ascension must be increased 20 ⁸ ; probably read wrong from sheet. Declination not observed. Given Declination was intended for ε Bootis and set wrong; it was
		therefore a bright star, probably 6177, observed 1 revolution wrong.

New number.	Old number.	Remarks.				
6190	6o8o	Both observations of this star reduced 1 ^m wrong, one in 1847, the other in 1874.				
6202	6092, 6096	Time from observing books gives the reduced Right Ascension of the latter the same as				
	, ,	the former; the Declination of the latter probably set 15' wrong. Reduced with th				
		proper argument this Declination becomes — 31° 50′ 25″.9.				
6216						
6217						
6218	6108	Differs about 18 from Oeltzen.				
	6110	This star is Lalande 28847, and needs to be increased 1h in Right Ascension. It				
		No. 6646.				
6223	6116	Right Ascension is 1 ^m too great.				
6238	6130/	Declination approximate.				
6241	6129, 6133	Right Ascension of the latter and Declination of both probably belong to this sta				
0241	0129, 0133	Right Ascension, when properly reduced for the former, becomes 14h 48m 12s.19, th				
		agreeing with 6238. The wire intervals, however, give about — 29° for this star.				
		this is O. Arg. S. 14065 there is something wrong in his Right Ascension.				
6246, 6247	6138, 6139	These stars seem to have a proper motion of about $+ 0^{9}$.09 and $-1''$.7.				
6266	6158, 6168	Right Ascension of the former and Declination of both belong to this star.				
6276, 6286	6168, 6178	Declinations approximate.				
	6182	Declination of zones probably 1' wrong. Gould XIV, 3628, agrees with Yarnall.				
6290 6291	6183	Declination approximate.				
- [
6306	6197	The character of May 17 1860 is not recorded in the ground nearly but is included.				
6333	6224	The observation of May 15, 1869, is not recorded in the annual results, but is include in the Catalogue.				
6366	6257	Argelander's Right Ascension is about 20st different from this. Yarnall agrees with				
		Gould XV, 455.				
6372	6263	For proper motion see Bonn VII, page 86.				
6374	62641, 6271	Both observations belong to this star, the former Declination being reduced 10" wro				
		and the latter Right Ascension Im wrong.				
6393	6284	Differs 1" from Weisse.				
6455	6347	This observation was made on the Prime Vertical in 1848, and incorrectly reduced				
		There was a mistake of 1 unit in the third decimal of the logarithm from which tan				
		was obtained.				
6478	6370	An error of 10' in copying mean place for 1870.0 in the volume for 1866.				
6482, 6483	6374	The Declination of the former was copied for the latter, but both were observed.				
6486	6377	Mistake of 108 in copying Right Ascension or in reducing to 1860.0.				
6508	6399	Declination copied 1° wrong.				
6511,6519,6522	6411	There are three stars here. The first is No. 6411 in the first edition (copied 1m wrong				
		the second is Gould XV, 1949, and the third is an anonymous star. The two of				
		served Right Ascensions differ 408, and the Declination belongs to neither.				
6524	6412, 6413	Both Declinations belong to this star. Two other observations in 1874 not included				
		the Catalogue.				
6525	6414	Mistake of sign in copying Declination.				
6527	6416	Right Ascension approximate.				
6536	6425	One observation was reduced 0.6 revolution wrong, and this only was used in the Catalog				
6561	6451	Mistake of 18 in the precession in Right Ascension.				
6562	6452	Time was recorded 20s wrong for one of these Declination observations, but the po				
	- TJ-	tion is correct.				
6590	6479	Right Ascension differs about 6s from Lalande.				
6621, 6627	6510, 6516	Precession in Right Ascension 1 st wrong for both these observations.				
0021,002/	0510, 0510	Treession in Aight Ascension 1- wrong for both these observations.				

New number.	Old number.	Remarks.				
6546 6110		Right Ascension 1h wrong.				
6651	6538	There was a mistake of 2' in reducing to 1860.0.				
6657	6542, 6544	Both Declinations belong to this star.				
6671	6558	Lalande's Right Ascension is 1 ^m too great. See Schjellerup 5624.				
6677,6690	6563, 6576	Mistakes of sign in precession in Right Ascension.				
6733	6619	There was an error of 1 ^m in reducing to 1860.0.				
6762	6646′′	Declination approximate.				
6770	6654	Mistake of 18 in the precession in Right Ascension.				
6787	6671	Argelander is 1' wrong in Declination. See Gould XVI, 174.				
6799	6683	Flamsteed, also Bessel and Baily call this q Herculis, but this is evidently a misinter				
132	- 3	pretation of Bayer. See Argelander's Uranometria Nova.				
6802	6686	The zones are in error 4' or 5'. See Stone 8802 and Gou'd XVI, 305.				
6805	6689	The Mean Year in Declination is wrong.				
6816	6700	This is evidently Bayer's q Herculis, although Flamsteed has put it in Serpens.				
6845, 6846	67281,6729,	There appears to be no center noted in the original observations, and there are probable				
0043, 0040	6729'	but two.				
6853	6736	Argelander's Declination is 10' too small. See Mural Zones 28, 25.				
6863	6746, 6757	Right Ascension of the former and Declination of both belong to this star.				
6874	6757	No Declination observed. This was intended for 6863, but the Circle was set about 30 wrong.				
6886	6769	Lalande is 1 ^m wrong in Right Ascension.				
6893, 6894	6776, 6777	These stars are 2177 and 2178 in the Cape Catalogue for 1840; the latter is also Piazz XVI, 60.				
6901	6783′	Declination approximate.				
6903	6785	One wire in the observation of June 26, 1876, was read 1 ⁸ wrong.				
6807,6808,6809	6788-67901	These six observations belong to only three separate stars. They were wrongly combined				
6915, 6916	6796, 6797	Observed as one star in Declination.				
6934	6814	For proper motion see Bonn VII, page 89; also Grant 4066.				
6951	6832	There was a mistake of 1' in reducing to 1860.0.				
6955	6836	Mistake in the precession in Right Ascension.				
6999	6878′	Declination approximate.				
7003	6883	This star is B. A. C. 5579, and is put in Ophiuchus by Baily, also by Gould, although				
, ,	0003	Flamsteed, Argelander, and Baily, in his edition of Flamsteed, in the British Cata logue, put it in Scorpio.				
7011	6890 , 6890 ′	Both observations belong to the same star.				
7059	6937	Differs 3' from Argelander, but agrees with Gould XVI, 2930, and is undoubtedly correct				
7063	69651	Time was reduced from book about 2m 30s wrong, and there are only two observations				
7065	6942	Declination approximate.				
7066, 7067	6943, 6944	Observed as one star in Declination.				
7069	6949	Right Ascension approximate.				
7074	6951,6959	Both observations belong to the same star. Time reduced wrong for the latter observation.				
7077	6953'	Declination approximate.				
7094	6970, 6971	Both observations belong to the same star. One Circle reading for the latter observation was recorded 2° wrong and the other one changed 2°.				
7105	69801	Declination approximate.				
7107	6982	Declination reduced 1' wrong. There was another observation, differing 19''.3 from this. There was probably a mistake in that observation, for this seems to be the better				

New number.	Old number.	Remarks.				
7114	6988	For proper motion see Bonn VII, page 90.				
7123	6996, 6997	Right Ascension of both and Declination of the latter belong to this star.				
7124	6996	Right Ascension not observed. Declination probably Gould XVI, 3401, from which differs about 20".				
7126	6999	Precession in Right Ascension computed 1º wrong.				
7129	7002	This is probably Transit Zones 123, 32, from which it differs 4', but agrees with (XVI, 3421.				
7144	7016, 7017'	Both observations belong to the same star, the former being I revolution wrong.				
7149	7021, 7027	There was a mistake of 30s in copying the latter observation from observing books.				
7150	7022	This observation was recorded 10 revolutions wrong.				
7164	7036	Mistake of 1° in the precession in Right Ascension.				
7180	7051', 7052	Both observations belong to the same star.				
7193	7064'	Declination approximate.				
7196	7067	Mean Year for Right Ascension is wrong.				
7200	7071	The Right Ascension of this star in the zones seems to be over 10 too great. Transit wire VI in the zones probably 50 too great. See also Gould XVI, 4064.				
7215	7086	For proper motion see Schjellerup 6083.				
7219, 7220	7090, 7091	Observed as one star in Declination.				
7253	7123, 7126	These observations, and also two others, belong to the same star. See first edition; all Gould XVII, 369.				
7290, 7291	7160, 7161	Observed as one star in Declination.				
7294	7164	Lacaille's Right Ascension seems to be about 10s too small. See Stone 9423.				
7311	7181	Wrong name.				
7339	7209	Two observations were made with the Prime Vertical in 1848, and intended for Herculis, the deduced position for 1860.0 heing 17 ^h 14 ^m 32 ^s .45 and + 32° 43′ 43″. As there is no star in this place it is helieved that 72 Herculis was observed on o				
	1 1	side of the meridian and a star following 5" and 10' North of it on the other side.				
7343	7213, 7214	Both observations belong to the same star, the refraction being computed 1' 40" wro for the former.				
7356	7225	Right Ascension approximate.				
7361	7231	This is also Mural Zones 257, 34, which is 1 ^m too great.				
7370	7239	Declination not observed. Given Declination belongs to 7374.				
7373	7241'	Declination approximate.				
7374	7239, 7241"	Right Ascension of the latter and Declination of the former belong to this star.				
7385	7252	The wrong sign was used in the second term of the precession in Right Ascension (0°.501				
7419	7285'	Declination approximate.				
7424, 7425	7290, 7290/	Right Ascensions and Declinations interchanged. Transits of the latter are bad, as vary nearly 20.				
7431	7296	Declination approximate.				
7442	7306	There is another observation in 1871 recorded 1m wrong.				
7466	7329	Right Ascension not observed. Given Right Ascension belongs to 7475, copied 1 wrong.				
7467	7331,7333	Right Ascension of the former and Declination of both belong to this star, that of the former being reduced I revolution wrong. The record is ambiguous.				
7469	7333, 7334	Right Ascension of both and Declination of the latter belong to this star.				
7475	7329, 7340	Right Ascension of both, the former of which is 1 ^m wrong, and Declination of the latt belong to this star.				
7490	7355,7356	Right Ascension of both, the former of which is reduced wrong by I year's precession and Declination of the former belong to this star.				

New number.	Old number.	Remarks.						
7491	7356	Right Ascension not observed. See preceding note.						
7506	7371	Compared with Lalande and Weisse this star seems to have a small proper motion.						
7512	7377	Differs 18 from Argelander, but agrees with Gould.						
7522	7385	Right Ascension approximate.						
7536	7400, 7401	Both observations belong to the same star, the former being copied to revolutions wrong						
7555,7556	7419', 7419''							
7564	7426	There is a mistake of 1' in copying.						
7571, 7572	7431,7432	Right Ascensions wrongly combined, magnitudes interchanged. Declination belong to the following star.						
7585	7444'	Declination approximate.						
75 ⁸ 7	7446	Weisse's Right Ascension is 108 too large. See Positiones Emendatæ.						
7588	7447, 7451	Right Ascension of former and Declination of both belong to this star.						
7591	7450	Differs 18 from Argelander, but agrees with Gould.						
7593	7451	Intended for 7588. Circle set 1° wrong.						
7594	7453	Stone and Yarnall call this star Lacaille 7464. If so there is a mistake in Lacaille						
7374	7 133	about 70s in Right Ascension and 1½ minutes in Declination.						
7597, 7598	7456	Right Ascension and Dcclination helong to different stars.						
7600	7458, 7459	Right Ascension of both and Declination of the latter, and another observation, belong to this star.						
7601	7458, 7460, 7460′	Right Ascension of the last two and Declination of the first belong to this star.						
7605	7464	Declination for this star was not copied. Only one observation in 1874. The such observation in Declination as that given in the second edition.						
7606	7464', 7466'	Right Ascension of the former and Declination of the latter belong to this star.						
7607	7465, 7468	Right Ascension of the former and Declination of the latter belong to this star.						
7608	7466, 7469	Right Ascension of the former and Declination of the latter belong to this star.						
7610	7464', 7466'	Approximate Right Ascension of the latter and Declination of the former belong this star.						
7615	7472', 7473	Both observations belong to this star.						
7619	7476', 7477	Both observations belong to this star.						
7620	7478, 7478'	Both observations belong to this star.						
7623	7481, 7483,	These three observations all belong to the same star. The second observation is reduced						
	7493	108 wrong. The approximate Right Ascension of the last is about 1111 wrong.						
7624	7486	Right Ascension of this star not observed. Given Right Ascension belongs to 7627.						
7627	7485, 7486	Right Ascension of both and Declination of the former belong to this star.						
7628	7488	Right Ascension approximate.						
7636, 7638	7495', 7495''	Declinations approximate.						
7637, 7640	7497, 7498	Declinations are interchanged.						
7644, 7649	7502, 7507	Declinations approximate.						
7651	7509, 7510	Both observations belong to this star.						
7663	7521'	Declination approximate.						
7672, 7676	7531, 7532	Right Ascensions approximate.						
7685, 7686	7543, 7544	Observed as one star in Declination.						
7688	7567	Two minutes wrong in Right Ascension. Both observations were changed 1 ^m the wrong way. Declination approximate. Given Declination belongs to 7715.						
7703	7559'	Declination approximate.						
7706	7562	Precession in Right Ascension has the wrong sign.						
7715	7567,7579	Right Ascension of the latter, which is 1 ^m wrong, and Declination of the former belon to this star.						

New number.	Old number.	Remarks.					
7726	7579,7582	Right Ascension of the latter and Declination of both, the latter of which is reduced 10" wrong, belong to this star.					
7749	7606/	Right Ascension approximate.					
7752	7607, 7608	Both observations belong to the same star. Circle read 2° wrong for the former observation.					
7753	7609	There is a mistake of 18 in the precession in Right Ascension.					
7767	7622	The Right Ascension in the Mural zones is evidently 1th too great.					
7799	7654	Lamont's Declination is 1' too small.					
7806, 7807	7661, 7662	There are Flamsteed's 100 Herculis, incorrectly denoted i by him.					
7816	7671	The Mural zones are probably 1 revolution wrong. Yarnall agrees with Gould,					
7837	769I	Baily's Right Ascension is 1 ^m too small. See Bonn VII, page 230.					
7839	7685	Time incorrectly noted.					
7846	7699	This position differs 8s in Right Ascension and 4' in Declination from Lacaille, but agrees with Gould and Stone.					
7857	7710	Declination copied I' wrong.					
7872	7724	This was about 8.5 magnitude, as observed with the Equatorial on November 5, 1886					
7882	7734,7735′	Both Right Ascensions of the latter and one of the former, which was reduced 2 ^s wrong belong to this star; also both Declinations.					
7884	7734	Only one of these Right Ascensions belongs to this star. Declination not observed. Se preceding note.					
7892	7742	Right Ascension approximate.					
7930	7779, 7781	Right Ascension of the former and Declination of both, the latter of which is reduce 3° wrong, belong to this star.					
7932	7781, 7782,	Right Ascension of the first and second, and Declination of the last, belong to this					
7933	7782, 7782'	Right Ascension of the latter and Declination of the former belong to this star.					
7938	7786	Declination has the wrong sign.					
7945	7793	Baily's Right Ascension is 1 ^m too small. See Bonn VII, page 230.					
7958	7805'	Declination approximate.					
7969	7815', 7816'	Right Ascension of the former and Declination of the latter belong to this star.					
7971	7815', 7816, 7816'	Right Ascension of the last two, and Declination of the first two, belong to this star.					
8010, 8013	7854	Right Ascension and Declination belong to different stars. Records show this co-					
8028	7871	Lalande's Right Ascension seems to be 1 ^m wrong.					
8085	7926	The zones are reduced 1' wrong in Declination.					
8128	7965	There was a mistake of 1' in reducing from 1845.0 to 1860.0.					
8144	7980	Differs about 4" from Weisse, but agrees with DM.					
8150, 8151	7986, 7987	Observed as one star in Declination.					
8175	8011, 8015'	Right Ascension of the former and Declination of both belong to this star.					
8184	8015', 8021	Right Ascension of both, the former of which is 30° wrong, and the Declination of the latter belong to this star.					
8213	8047	Mistake of 1' in reducing to 1860.0.					
8217, 8221	8051	Right Ascension and Declination belong to different stars.					
8222	8054'	Declination approximate.					
8238	8070	Mistake of sign in copying Declination.					
8259	8091	Lamont's Declination is 1' wrong.					
8279	8111	Stone did not observe Lacaille 7990. Stone's 10375 agrees with Gould XVIII, 3079					
		Lacaille 7990 agrees with Gould XVIII, 3093, and with this star.					

New number.	Old number.	Remarks.				
8282	8114	Argelander is 10' wrong in Declination.				
8323	8153"	Declination approximate.				
8362	8192	The zones seem to be about 30" wrong in Declination. Gould agrees with Yarnall.				
8374	8211	Right Ascension copied 1 ^m wrong.				
8379, 8386	8207', 8214'	Declinations approximate,				
8393	8221	Differs about 8s in Right Ascension, and 3' or 4' in Declination from Lacaille.				
8404	8232	Differs 6a from Argelander, but agrees with Gould and Lamont. There is another of servation in Right Ascension.				
8409	8236, 82361	These observations evidently belong to the preceding star. Nothing is stated about center				
8459	8284'	Declination approximate.				
8465	8290	Meridian Circle zones seem to be 1 ¹¹⁰ wrong in Right Ascension.				
8483	8307'	Given Declination belongs to 8485.				
8485	8307', 8308'	Declination of both probably belong to this star. The Declination of the latter do not agree very well with Weisse, or with an Equatorial observation on November 1 1886. If the same observation, it is not very good.				
8486	8309	The observing books show that there was a slight error in setting the Circle; it was tended for 8471.				
8493	8310', 8315'	Right Ascension of the latter and Declination of both belong to this star. There is n star in the position of the former, and it is not known to what the Right Ascensio belongs. The observation is correct and on Chronograph sheet.				
8496	8328	One of these Declination observations belongs to this star, being about 1 ^m wrong.				
8499	8318, 8318/	Both observations belong to this star, the latter being 5 revolutions wrong.				
8501	8328	One of these Declination observations belongs to this star, being 10 revolutions wron				
8510	8328	Right Ascension belongs to this star, Declination to 8496 and 8501.				
8515	8332'	Right Ascension approximate.				
8522	83381	Declination approximate.				
8534	8349', 8349''	Both observations belong to the same star, the latter being copied 2° wrong.				
8545	83581	Declination approximate.				
8549, 8550	8362, 8363	All the observations in Declination appear to belong to the preceding star.				
8567	8378/	The wrong sign was applied in the reduction to mean place for one of these observations in Declinations. The records in Mural Circle observing books give Im in the greater for each Declination. This minute agrees with the Right Ascension observations, and also with Gould.				
8569, 8571	8380, 8382	Right Ascensions and Declinations are interchanged.				
8582	8390, 8394'. 8395	All three observations belong to this star.				
8583		This star was observed in 1872, but not put down in the Catalogue.				
8592	8403'	Right Ascension approximate.				
8595	8406	Lamont's Right Ascension is 10 ⁸ too great.				
8597	8406′′	This star appears to be correctly reduced, although differing about 12" from Weisse.				
8674	8476	Magnitude should be 9.0. The zones appear to be about 1' wrong in Declination.				
8684	8486	There was no observation of this star in Declination. Two observations of 8693, main 1863, were credited to this star. The approximate Declination was put down -29° 9' in the first edition; this, with the seconds belonging to 8693, were used the second edition.				
8689	8490	There was a mistake of 1' in copying both observations.				
8692	8493, 8494	Right Ascension of both, and Declination of the former, belong to this star.				
8693	8486, 8495	The seconds of Declination credited to the former should be 0.4, and belong to t star; there was also a mistake in the minutes in copying for 1863.				
8696	8494	star; there was also a mistake in the minutes in copying for 1863. There was no Right Ascension of this star observed.				

New number.	Old number.	Remarks.				
8704	8504	It is doubtful if this is B. A. C. 6770 or Lacaille 8225. See Stone, and also Gould's General Catalogue.				
8753	8550	This star is Lacaille 8262, and apparently has a proper motion of 0".5 (Holden).				
8769 8566		Two magnitudes estimated on the Mural Circle are 9.0 and 9.5, respectively.				
	8586	There is no star in this place; it was intended for Iris. There is a star about 70 earlier, and the same Declination.				
8828	8621	Lalande's Right Ascension is 48 too small. See Bonn VII, page 233.				
8830	8622	Mistake of sign in copying Declination.				
8836, 8837	8628, 8629	Observed as one star in Declination.				
8857	86481	Declination approximate.				
8874	8665	Mistake of 1° in reducing from 1870.0 to 1860.0.				
8879	8870'', 8870'''	Both observations belong to this star; also another one in 1877.				
8881	8670, 8671'	Both observations belong to this star.				
8888	8677'	Argelander is either 100 wrong or observed over wire 3, instead of 2, making a differ-				
0000	00//	ence of 108,19.				
4	8715	Observed for Iris, probably 10 ^m wrong. If so it is a 9.5-magnitude star, whose Right				
	0/15	Ascension is 19h 53m 268.94 and Declination —14° 12′ 42′′.1.				
8000						
8929	V=2= 0=20	This observation is in the annual volume, but not copied in the Catalogue.				
8953	8735, 8738	Former observation is 10s wrong in Right Ascension.				
8960	8744	For proper motion see Bonn VII, page 96. Compare also with Stone and Gould.				
8967	8750/	Declination approximate.				
1	8767	There is no such star. It was observed on the Prime Vertical in 1848, and probably intended for 8981 or 8982, and different stars observed East and West.				
8984	8768	The sign of the Declination copied wrong.				
9002	8784	Declination approximate.				
9027	8806, 8806′	The degree and minute of the former observation was copied from 9007.				
9039, 9040	8818, 8818/	It is probable that both these observations belong to the preceding star.				
9075	8851	Right Ascension reduced 18 wrong.				
9095, 9101	8868/	Right Ascension and Declination belong to different stars.				
9105	88781	Declination approximate.				
9142	8912	For proper motion see Bonn VII, page 96.				
9146	8916	Right Ascension 18 wrong. One observation was ambiguous and the other changed 18.				
9179	8949	Declination copied 10° wrong.				
9184	8954	Right Ascension of the zones incorrectly reduced by 48.				
9237	9001, 9005	Same star. Right Ascension of former incorrectly copied from observing books.				
9310	9067, 9078	Both observations belong to the same star, the former copied 1 ^m wrong.				
9311	9079	The zones are undoubtedly recorded 4 revolutions wrong. Should be 40.903. See also Gould XX, 1665.				
9331	9099, 90991	Both observations belong to the same star.				
9352	9119	Name wrong.				
9356	9123	This observation appears to be copied 5° wrong. It now agrees with Gould 28665.				
9367	9133′	Probably observed 1 revolution wrong. It was also copied 1' wrong.				
9381	9144, 9145	Both observations belong to the same star, the latter being copied 20° wrong.				
9394	9157	Lamont's Declination is 10' too small. Yarnall agrees with Gould XX, 1665.				
9411	9174	This is Schjellerup 8424. He says that Baily's Right Ascension is 8°.5 too great.				
9412	9175	There is a mistake of 10" in copying Declination.				
9442	9203', 9203''					
9447, 9448	9208	It is assumed that these observations belong to the larger or following star.				
9447, 9448 9208 It is assumed that the observations in 1847 and 1848 belong to the two component that the center was not observed except in Declination.						

		Remarks.			
9459	9216	Weisse's Declination is 1 ^m too great. See Positiones Emendate.			
9461	9218	Magnitude should be 4.0.			
9464	9221	This is the same as Stone 11213, but he incorrectly identifies his 11209 with it.			
9519	9273	Argelander, in Bonn VII, ealls the magnitude 7.0.			
9538	9290	This star has a proper motion of $-0^{\circ}.29$ and $-1^{\prime\prime}.2$. (Moesta).			
9553	9305	This star may have a small proper motion.			
9576	9327'	Declination approximate.			
9583	9334	Holden and Peters both call this Groombridge 3445.			
9587	9338	Precession in Right Ascension is 18 wrong.			
9588	9338′	Declination approximate.			
9591	9341	Both estimates of magnitude are 5.7, but this is probably too bright.			
9621	9366	This is also Mural Zones 196, 10, but no Right Ascension is given.			
9636	9380	Argelander's Right Ascension is 1 ^m too great.			
9637	9381,9382	Both observations belong to the same star, the revolutions for the latter observation bei			
<i>.</i>	33 733	recorded 32, instead of 39. Argelander's Right Ascension is also 1 ^m too great.			
9653	9399'	Right Ascension approximate.			
9659	9404'	Declination approximate.			
9691	9434	Weisse's Right Ascension is 1 ^m too small. See Positiones Emendatæ.			
9699	9442	The sign of the Declination has been changed.			
9724	9466	Stone calls this Lacaille 8889, but his number 11449 corresponds with it.			
9739	9481, 9521	For the latter observation the time is incorrectly reduced. Both Declinations belong this star. The two observations of the latter were made on the Prime Vertical a incorrectly reduced. The observed Right Ascension for this observation, when pro-			
		erly reduced, is $21^{\rm h} 33^{\rm m} 46^{\rm s}.83$, and Declination $+38^{\circ} 50' 14''.69$ for 1850.0.			
9780	9521	Declination approximate.			
9781	9521'	Right Ascension approximate.			
9790	9530	This is also Lamont 8534.			
9801	9540′, 9541	Both observations belong to this star. The former was copied and reduced 5° wrong properly reduced, its Right Ascension is 21h 40m 58s.12.			
9810	9550	The sign of the Declination is changed.			
9817	9557	Declination approximate.			
9823	9563	Right Ascension is 5 ^s greater than DM., but the two observations agree, and also wit two Prime Vertical observations in 1847.			
9826, 9831	9565', 9569'	Declinations approximate.			
9848	9585	This observation differs 30" from Bonn, but the three observations have only a range about 1" in Declination.			
9858, 9859	9595, 9596	Groombridge's Right Ascensions are 10 ⁸ too great. See Radcliffe 5438 and 5439.			
9861	9598	This star is also Meridian Circle Zones 113, 8. The zones differ about 31", and Y na!l's position is about the mean, and very well agrees with Gould XXI, 1507.			
9890	96261	Declination approximate.			
9894	9629	There is a mistake of 1° in copying. Precession is also wrong.			
9895	9630	Differs about 2 ^s from Argelander.			
9897	9633, 9634	Right Ascension of both and Declination of the latter belong to this star.			
9903	9633	Declination belongs to this star; Right Ascension not observed.			
9932	9666	There is a mistake of 38 in copying or reducing.			
9935	9669, 9678	Both observations belong to this star, the latter being 1 ^m wrong.			
9941	9675	This is also O. Arg. S. 21870, but no Right Ascension was observed.			
9951,9952	9684", 9684"	Observed as one star in Declination.			
	, , , , , , , , , , , ,	Declination has the wrong sign.			

New number.	Old number.	Remarks.				
9992	9724	Mistake of 30' in copying.				
10001	9733	Differs 4s from Argelander, but agrees with Schönfeld. Observations seem correct.				
10008	9730, 9740	Both observations belong to this star, the former being 1 ^m wrong.				
10048	9779	This star has a large proper motion in Right Ascension.				
10051	9781'	This star differs from DM. about 5°, but both observations are consistent.				
10058	9787	Differs 18 from Argelander, but appears to be correct.				
10080	9808	This star has a proper motion of — o''.4? (Holden.)				
10110, 10111	9832', 9832''	Observed as one star in Declination.				
10113	9834	For proper motion see Bonn VII, page 102.				
10116	9837	The K. in DM. is incorrect.				
10178, 10179	9896', 9896'!	Declinations approximate.				
0196		Differs I ^m from Argelander.				
	9914	There was a mistake in the reduction of this star. It now differs 41" from the Mur				
0197	9913	zones, 33" from the Meridian Circle zones, and 10" from Gould's zones.				
0261	9978	Mistake of I' in reducing to mean place for both the observations.				
10279	9993'''	Declination approximate.				
10283	9997	This is probably Weisse XXII, 795, which is 30" wrong in Declination. Schönfe agrees with Yarnall. Bessel may have made a mistake of 30" or probably a typ				
		graphical error of 5 for 2.				
0286	9998, 10000	Both observations belong to the same star, the former observation being 5 revolution wrong. Time agrees when properly reduced.				
0305, 10306	10018, 10019	See Bonn VII, page 104.				
0310	10023	The zone observation is reduced 1 ^m wrong. It should be 22 ^h 40 ^m 57 ^s .58.				
0333	10047	This is also Mural Zones 74, 25; it differs from Lacaille about 7 ⁸ and 9', but agrees wi Stone 11917. There is probably a mistake in Lacaille.				
10371	10078/	Time reduced wrong.				
10375	10086	Differs 4s from Argelander, but agrees with Gould.				
0381	10092, 10094	Right Ascension of the former and Declination of the latter belong to this star.				
0383	10092, 10095	Right Ascension of the latter and declination of the former belong to this star.				
0405	10118	Differs 18 from Argelander, but appears correct.				
0413	10126	This star has a proper motion of $+ 0^{\circ}.031$ and $+ 0^{\prime\prime}.28$. See Armagh (2), page 157.				
0423	10136	Rümker's Right Ascension is 10 ⁸ too great.				
0436	10149	The observations in 1865 and 1869 differ by 28.11. Yarnall changed one of them				
		but they are both right. Gould, in A. N. 237, deduces a proper motion of \perp 08.56 and $+$ 1".3058.				
0447	10160	Declination reduced 1' wrong.				
0478	10191, 10205	Right Ascension of the former and Declination of both belong to this star, the latter being				
04/0		reduced 1' wrong.				
	10205	Declination belongs to previous star. Right Ascension belongs to Weisse (2) XXII				
	10203	49, whose Declination is $+37^{\circ}$ 10' instead of $+38^{\circ}$ 10'. The observation is not				
		the volume, but only in the results, and this is incorrect.				
0526	10240	This star is reduced wrong in the zones, and needs to be corrected by $+2^{8}$.				
0553	102661	Declination approximate.				
0564	10277, 10293	Right Ascension of former and Declination of both belong to this star.				
0567	10280	The observation in the zones is reduced incorrectly by 20 ^s in Right Ascension and 40 in Declination. The position in the zones should be 23 th 11 th 36 ^s .49 and —39° 143".5.				
0580, 10581	10293, 10294	Magnitudes interchanged and Declination of the former not observed.				
0588	10299	This is also Bonn VI, 23h, 6.				

New number.	Old number.	Remarks.		
10604	10304	The Right Ascension is 1 ^m wrong. One observation in 1869 was recorded 1 ^m wrong; the others in 1876 are recorded and reduced correctly, and afterward changed.		
10623 •	10343	The Declination has been obtained from the wire intervals, two other stars also being observed on the same setting, on September 20, 1865. There was a mistake of 1 ^m in reduction. Fedorenko also made the same mistake. See Bonn VI, page [25].		
10630	10339, 10340,	These observations all belong to the same star. The refraction for the middle observation should be 5' 11".8 instead of 31".2. Reduction to mean place is also 10" wrong. For the last observation the instrumental correction should be —1".35 instead of +0".81; it is also 1 revolution =31".2 wrong in Declination.		
10637	10348, 10350,	The first and last are identically the same observation, the first being wrongly reduced and afterward corrected. The two observations are the uncorrected and the corrected Right Ascensions. The middle observation also belongs to the same star; the approximate Declination of the others are incorrect.		
10647	10361	Declination not observed.		
10651	10364'	Mistake of 28 in reducing from 1876.0 to 1860.0.		
10670	10361, 10383	Right Ascension of the latter and Declination of both belong to this star.		
10697	10409	Weisse's Right Ascension is 1 ^m too small. See Positiones Emendatæ.		
10701	10413	Weisse's Right Ascension is 50s too small. See Positiones Emendatæ.		
10707	10418/	Declination approximate.		
10768, 10769	10475', 10476,	The center does not appear to have been observed. Declinations of the first and second stars were both observed.		
10771	10478	For proper motion see Stone 12277.		
10790	10495'	Declination copied wrong. There was also another observation.		
10831	10539'	This observation is 1 ^m out of place. Declination approximate.		
10834	10534'	Declination approximate.		
10843	10542'	This star is not found in DM. It was observed for 10877, the observing list being 3 ^m wrong; it is probably a faint star. Observation seems correct.		
10847	10546	This is DM. — 1°, 4500. Lamont is probably 1' wrong. Yarnall's observations all agree.		
10878	10577	Argelander is 1 ^m wrong; the minute is not noted. Yarnall's observations all agree; also, Transit and Meridian Circle zones, one of which is reduced 1 ^m wrong.		
10891, 10892	10590, 10591	Observed as one star in Declination. Observation is possibly that of the first star.		
10919	10617', 10618	Declinations of both belong to this star.		
10923, 10924	10621, 10622	Magnitudes are wrong; probably interchanged.		
10929	10627	This is Bonn VI, 23h, 65.		
10959	10653'	Declination approximate.
